Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 9735-10 was prepared by Technical Committee ISO/TC 154, *Processes, data elements and documents in commerce, industry and administration* in collaboration with UN/CEFACT through the Joint Syntax Working Group (ISO/TC 154/JWG 1).

This second edition cancels and replaces the first edition (ISO 9735-10:2002), informative Annex A of which has been revised in order to implement all syntax code releases since the publication of the first edition of ISO 9735-10. In addition the representation of data element 0536 'Certificate reference' has been amended from an..35 to an..70.

ISO 9735 consists of the following parts, under the general title *Electronic data interchange for administration, commerce and transport (EDIFACT) — Application level syntax rules (Syntax version number: 4, Syntax release number: 1)*:

- *Part 1: Syntax rules common to all parts*
- *Part 2: Syntax rules specific to batch EDI*
- *Part 3: Syntax rules specific to interactive EDI*
- *Part 4: Syntax and service report message for batch EDI (message type — CONTRL)*
- *Part 5: Security rules for batch EDI (authenticity, integrity and non-repudiation of origin)*
- *Part 6: Secure authentication and acknowledgement message (message type — AUTACK)*
- *Part 7: Security rules for batch EDI (confidentiality)*
- *Part 8: Associated data in EDI*
- *Part 9: Security key and certificate management message (message type — KEYMAN)*
- *Part 10: Syntax service directories*

NOTE Due to this new edition of ISO 9735-10 the syntax release number provided in the general title has been increased from '1' to '2'.

Further parts may be added in the future.

Introduction

This part of ISO 9735 includes the rules at the application level for the structuring of data in the interchange of electronic messages in an open environment, based on the requirements of either batch or interactive processing. These rules have been agreed by the United Nations Economic Commission for Europe (UN/ECE) as syntax rules for Electronic Data Interchange for Administration, Commerce and Transport (EDIFACT) and are part of the United Nations Trade Data Interchange Directory (UNTDID) which also includes both batch and interactive Message Design Guidelines.

This part of ISO 9735 may be used in any application, but messages using these rules may only be referred to as EDIFACT messages if they comply with other guidelines, rules and directories in the UNTDID. For UN/EDIFACT, batch messages shall comply with the message design rules for batch usage. These rules are maintained in the UNTDID.

Communications specifications and protocols are outside the scope of this part of ISO 9735.

Electronic data interchange for administration, commerce and transport (EDIFACT) — Application level syntax rules (Syntax version number: 4, Syntax release number: 2) — Part 10: Syntax service directories

1 Scope

This part of ISO 9735 specifies the syntax service directories of all parts of the ISO 9735 series.

2 Conformance

Whereas this part shall use a version number of “4” in the mandatory data element 0002 (Syntax version number), and shall use a release number of “02” in the conditional data element 0076 (Syntax release number), each of which appear in the segment UNB (Interchange header), interchanges continuing to use the syntax defined in the earlier published versions shall use the following Syntax version numbers, in order to differentiate them from each other and from this part:

- ISO 9735:1988: *Syntax version number: 1*
- ISO 9735:1988 (amended and reprinted in 1990): *Syntax version number: 2*
- ISO 9735:1988 and its Amendment 1:1992: *Syntax version number: 3*
- ISO 9735:1998: *Syntax version number: 4*

Conformance to a standard means that all of its requirements, including all options, are supported. If all options are not supported, any claim of conformance shall include a statement which identifies those options to which conformance is claimed.

Data that is interchanged is in conformance if the structure and representation of the data conform to the syntax rules specified in this part of ISO 9735.

Devices supporting this part of ISO 9735 are in conformance when they are capable of creating and/or interpreting the data structured and represented in conformance with the standard.

Conformance to this part shall include conformance to parts 1 to 9 of ISO 9735.

When identified in this part of ISO 9735, provisions defined in related standards shall form part of the conformance criteria.

3 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies.

ISO 9735-1:2002, *Electronic data interchange for administration, commerce and transport (EDIFACT) — Application level syntax rules (Syntax version number: 4, Syntax release number: 1) — Part 1: Syntax rules common to all parts*

ISO 9735-2:2002, *Electronic data interchange for administration, commerce and transport (EDIFACT) — Application level syntax rules (Syntax version number: 4, Syntax release number: 1) — Part 2: Syntax rules specific to batch EDI*

ISO 9735-3:2002, *Electronic data interchange for administration, commerce and transport (EDIFACT) — Application level syntax rules (Syntax version number: 4, Syntax release number: 1) — Part 3: Syntax rules specific to interactive EDI*

ISO 9735-4:2002, *Electronic data interchange for administration, commerce and transport (EDIFACT) — Application level syntax rules (Syntax version number: 4, Syntax release number: 1) — Part 4: Syntax and service report message for batch EDI (message type — CONTRL)*

ISO 9735-5:2002, *Electronic data interchange for administration, commerce and transport (EDIFACT) — Application level syntax rules (Syntax version number: 4, Syntax release number: 1) — Part 5: Security rules for batch EDI (authenticity, integrity and non-repudiation of origin)*

ISO 9735-6:2002, *Electronic data interchange for administration, commerce and transport (EDIFACT) — Application level syntax rules (Syntax version number: 4, Syntax release number: 1) — Part 6: Secure authentication and acknowledgement message (message type — AUTACK)*

ISO 9735-7:2002, *Electronic data interchange for administration, commerce and transport (EDIFACT) — Application level syntax rules (Syntax version number: 4, Syntax release number: 1) — Part 7: Security rules for batch EDI (confidentiality)*

ISO 9735-8:2002, *Electronic data interchange for administration, commerce and transport (EDIFACT) — Application level syntax rules (Syntax version number: 4, Syntax release number: 1) — Part 8: Associated data in EDI*

ISO 9735-9:2002, *Electronic data interchange for administration, commerce and transport (EDIFACT) — Application level syntax rules (Syntax version number: 4, Syntax release number: 1) — Part 9: Security key and certificate management message (message type — KEYMAN)*

4 Terms and definitions

For the purposes of this part of ISO 9735, the terms and definitions given in ISO 9735-1 apply.

5 Syntax service directories

5.1 Service segment directory

5.1.1 Service segment specification legend:

Function	The function of the segment																		
POS	The sequential position number of the stand-alone data element or composite data element in the segment table																		
TAG	The tags for all service segments contained in the segment directory shall start with the letter "U". The tags of all service composite data elements start with the letter "S", and the tags of all service simple data elements start with the figure "0".																		
Name	Name of a COMPOSITE DATA ELEMENT in capital letters Name of a STAND-ALONE DATA ELEMENT in capital letters Name of a component data element in small letters																		
S	The status of the stand-alone data element or composite data element in the segment, or of the components in the composite (where M = Mandatory and C = Conditional)																		
R	The maximum number of occurrences of a stand-alone data element or composite data element in the segment																		
Repr.	Data value representation of the stand-alone data element or component data elements in the composite: <table data-bbox="335 1108 925 1424"> <tr><td>a</td><td>alphabetic characters</td></tr> <tr><td>n</td><td>numeric characters</td></tr> <tr><td>an</td><td>alphanumeric characters</td></tr> <tr><td>a3</td><td>3 alphabetic characters, fixed length</td></tr> <tr><td>n3</td><td>3 numeric characters, fixed length</td></tr> <tr><td>an3</td><td>3 alphanumeric characters, fixed length</td></tr> <tr><td>a..3</td><td>up to 3 alphabetic characters</td></tr> <tr><td>n..3</td><td>up to 3 numeric characters</td></tr> <tr><td>an..3</td><td>up to 3 alphanumeric characters</td></tr> </table>	a	alphabetic characters	n	numeric characters	an	alphanumeric characters	a3	3 alphabetic characters, fixed length	n3	3 numeric characters, fixed length	an3	3 alphanumeric characters, fixed length	a..3	up to 3 alphabetic characters	n..3	up to 3 numeric characters	an..3	up to 3 alphanumeric characters
a	alphabetic characters																		
n	numeric characters																		
an	alphanumeric characters																		
a3	3 alphabetic characters, fixed length																		
n3	3 numeric characters, fixed length																		
an3	3 alphanumeric characters, fixed length																		
a..3	up to 3 alphabetic characters																		
n..3	up to 3 numeric characters																		
an..3	up to 3 alphanumeric characters																		

5.1.2 Dependency note identifiers

Code	Name
D1	One and only one
D2	All or none
D3	One or more
D4	One or none
D5	If first, then all
D6	If first, then at least one more
D7	If first, then none of the others

See ISO 9735-1:2002, 11.5, for the definition of the dependency note identifiers.

5.1.3 Index of service segments by tag

Change indicators (in comparison with ISO 9735-10 published in 2002)

a plus sign (+)	for an addition
an asterisk (*)	for an amendment to structure
a hash sign (#)	for changes to names
a vertical bar ()	for changes to text for descriptions, notes and functions
a minus sign (-)	for a deletion
an X sign (X)	for marked for deletion

Tag	Name
UCD	Data element error indication
UCF	Group response
UCI	Interchange response
UCM	Message/package response
UCS	Segment error indication
UGH	Anti-collision segment group header
UGT	Anti-collision segment group trailer
UIB	Interactive interchange header
UIH	Interactive message header
UIR	Interactive status
UIT	Interactive message trailer
UIZ	Interactive interchange trailer
UNB	Interchange header
UNE	Group trailer
UNG	Group header
UNH	Message header
UNO	Object header
UNP	Object trailer
UNS	Section control
UNT	Message trailer
UNZ	Interchange trailer
USA	Security algorithm
USB	Secured data identification
USC	Certificate
USD	Data encryption header
USE	Security message relation
USF	Key management function
USH	Security header
USL	Security list status
USR	Security result
UST	Security trailer
USU	Data encryption trailer
USX	Security references
USY	Security on references

5.1.4 Index of service segments by name

Change indicators (in comparison with ISO 9735-10 published in 2002)

a plus sign (+) for an addition
 an asterisk (*) for an amendment to structure
 a hash sign (#) for changes to names
 a vertical bar (|) for changes to text for descriptions,
 notes and functions
 a minus sign (-) for a deletion
 an X sign (X) for marked for deletion

Tag	Name
UGH	Anti-collision segment group header
UGT	Anti-collision segment group trailer
USC	Certificate
UCD	Data element error indication
USD	Data encryption header
USU	Data encryption trailer
UNG	Group header
UCF	Group response
UNE	Group trailer
UIB	Interactive interchange header
UIZ	Interactive interchange trailer
UIH	Interactive message header
UIT	Interactive message trailer
UIR	Interactive status
UNB	Interchange header
UCI	Interchange response
UNZ	Interchange trailer
USF	Key management function
UNH	Message header
UNT	Message trailer
UCM	Message/package response
UNO	Object header
UNP	Object trailer
UNS	Section control
USB	Secured data identification
USA	Security algorithm
USH	Security header
USL	Security list status
USE	Security message relation
USY	Security on references
USX	Security references
USR	Security result
UST	Security trailer
UCS	Segment error indication

5.1.5 Service segment specifications

Change indicators (in comparison with ISO 9735-10 published in 2002)

a plus sign (+)	for an addition
an asterisk (*)	for an amendment to structure
a hash sign (#)	for changes to names
a vertical bar ()	for changes to text for descriptions, notes and functions
a minus sign (-)	for a deletion
an X sign (X)	for marked for deletion

UCD DATA ELEMENT ERROR INDICATION

Function: To identify an erroneous stand-alone, composite or component data element, and to identify the nature of the error.

Pos	TAG	Name	S R	Repr.	Notes
010	0085	SYNTAX ERROR, CODED	M 1	an..3	
020	S011	DATA ELEMENT IDENTIFICATION	M 1		
	0098	Erroneous data element position in segment	M	n..3	
	0104	Erroneous component data element position	C	n..3	
	0136	Erroneous data element occurrence	C	n..6	

UCF GROUP RESPONSE

Function: To identify a group in the subject interchange and to indicate acknowledgement or rejection (action taken) of the UNG and UNE segments, and to identify any error related to these segments. It can also identify errors related to the USA, USC, USD, USH, USR, UST, or USU security segments when they appear at the group level. Depending on the action code, it may also indicate the action taken on the messages and packages within that group.

Pos	TAG	Name	S R	Repr.	Notes

3. D5(080, 060, 050, 090) If first, then all
4. D5(090, 080, 060, 050) If first, then all

OTHER NOTES:

5. 0135, may only contain the values UNG, UNE, USA, USC, USD, USH, USR, UST, or USU.
6. This data element shall be present when reporting an error in a security segment.
7. This data element shall be present if it was present in the subject interchange.

UCI INTERCHANGE RESPONSE

Function: To identify the subject interchange, to indicate interchange receipt, to indicate acknowledgement or rejection (action taken) of the UNA, UNB and UNZ segments, and to identify any error related to these segments. It can also identify errors related to the USA, USC, USD, USH, USR, UST, or USU security segments when they appear at the interchange level. Depending on the action code, it may also indicate the action taken on the groups, messages, and packages within that interchange.

OTHER NOTES:

5. 0135, may only contain the values UNA, UNB, UNZ, USA, USC, USD, USH, USR, UST, or USU.
6. This data element shall be present when reporting an error in a security segment.

UCM MESSAGE/PACKAGE RESPONSE

Function: To identify a message or package in the subject interchange, and to indicate that message's or package's acknowledgement or rejection (action taken), and to identify any error related to the UNH, UNT, UNO, and UNP segments. It can also identify errors related to the USA, USC, USD, USH, USR, UST, or USU security segments when they appear at the message or package level.

6. D5(090, 050, 040, 100) If first, then all
7. D5(100, 090, 050, 040) If first, then all

OTHER NOTES:

8. 0135, may only contain the values UNH, UNT, UNO, UNP, USA, USC, USD, USH, USR, UST, or USU.
9. This data element shall be present when reporting an error in a security segment.

UCS SEGMENT ERROR INDICATION

Function: To identify either a segment containing an error or a missing segment, and to identify any error related to the complete segment.

Pos	TAG	Name	S R	Repr.	Notes
010	0096	SEGMENT POSITION IN MESSAGE BODY	M 1	n..6	
020	0085	SYNTAX ERROR, CODED	C 1	an..3	1

NOTES:

1. 0085, shall contain a value only if the error pertains to the segment identified by data element 0096.

UGH ANTI-COLLISION SEGMENT GROUP HEADER

Function: To head, identify and specify an anti-collision segment group.

Pos	TAG	Name	S	R	Repr.	Notes
010	0087	ANTI-COLLISION SEGMENT GROUP IDENTIFICATION	M	1	an..4	1

NOTES:

1. 0087, the value shall be the segment group number of the UGH/UGT segment group as stated in the message specification. It shall be identical to the value in 0087 in the corresponding UGT segment.

UGT ANTI-COLLISION SEGMENT GROUP TRAILER

Function: To end and check the completeness of an anti-collision segment group.

Pos	TAG	Name	S	R	Repr.	Notes
010	0087	ANTI-COLLISION SEGMENT GROUP IDENTIFICATION	M	1	an..4	1

NOTES:

1. 0087, the value shall be the segment group number of the UGH/UGT segment group as stated in the message specification. It shall be identical to the value in 0087 in the corresponding UGH segment.

UIB INTERACTIVE INTERCHANGE HEADER

Function: To head and identify an interchange.

Pos	TAG	Name	S	R	Repr.	Notes

DEPENDENCY NOTES:

1. D5(030, 020) If first, then all
2. D5(050, 020) If first, then all

OTHER NOTES:

3. S001/0002, shall be '4' to indicate this version of the syntax.
4. S302/0304, when provided by the responder, shall be returned by the initiator throughout the dialogue.
5. S002/0004, may be same as S302/0303 for initiator of transaction.
6. 0325, only used if the interchange is a duplicate transfer.
7. 0035, set by the initiator if the dialogue is a test. Applies to every subsequent message and service segment in the dialogue. Otherwise not used.
8. Dialogue and transaction control can be accomplished through the dialogue (S302) and transaction (S303) references. Optionally, if another means of control is chosen, these two composite data elements need not be utilised.

UIH INTERACTIVE MESSAGE HEADER

Function: To head, identify and specify a message.

Pos	TAG	Name	S R	Repr.	Notes

	0314	Event time	C	an..15	
	0336	Time offset	C	n4	
060	0035	TEST INDICATOR	C 1	n1	3

NOTES:

1. The value in 0340 shall be unique within the interchange (except for a duplicate transfer).
2. The value(s) in S302 shall be identical to the value(s) in S302 in the preceding UIB.
3. 0035, when used, test applies to the message only.
4. Dialogue control can be accomplished through the dialogue reference (S302). Optionally, if another means of control is chosen, this composite data element need not be utilised.
5. A combination of 0340 and S302 may be used to identify uniquely a message.

UIR INTERACTIVE STATUS

Function: To report the status of the dialogue.

Note: To avoid endless loops, the UIR segment is not used to respond to a UIR received with syntax errors.

100	0567	SECURITY STATUS, CODED	C 1	an..3	1
110	0569	REVOCATION REASON, CODED	C 1	an..3	1

DEPENDENCY NOTES:

1. D5(110, 100) If first, then all

OTHER NOTES:

2. 0536, if a full certificate (including the USR segment) is not used, the only data elements of the certificate shall be a unique certificate reference made of: the certificate reference (0536), the S500 identifying the issuer certification authority or the S500 identifying the certificate

owner, including its public key name. In the case of a non-EDIFACT certificate data element 0545 shall also be present.

3. S500/0538, identifies a public key: either of the owner of this certificate, or the public key related to the private key used by the certificate issuer (certification authority or CA) to sign this certificate.
4. 0507, the original character set encoding of the certificate when it was signed. If no value is specified, the character set encoding corresponds to that identified by the character set repertoire standard.
5. 0543, the original character set repertoire of the certificate when it was signed. If no value is specified, the default is defined in the interchange header.
6. S505, when this certificate is transferred, it will use the default service characters defined in part 1 of ISO 9735, or those defined in the service string advice, if used. This data element may specify the service characters used when the certificate was signed. If this data element is not used then they are the default service characters.
7. S501, dates and times involved in the certification process. Four occurrences of this composite data element are possible: one for the certificate generation date and time, one for the certificate start of validity period, one for the certificate end of validity period, one for revocation date and time.

USD DATA ENCRYPTION HEADER

Function: To specify size (i.e. length of data in octets of bits) of encrypted data following the segment terminator of this segment.

Pos	TAG	Name	S R	Repr.	Notes
010	0556	LENGTH OF DATA IN OCTETS OF BITS	M 1	n..18	
020	0518	ENCRYPTION REFERENCE NUMBER	C 1	an..35	
030	0582	NUMBER OF PADDING BYTES	C 1	n..2	

USE SECURITY MESSAGE RELATION

Function: To specify the relation to earlier security messages, such as response to a particular request, or request for a particular answer.

Pos	TAG	Name	S R	Repr.	Notes
010	0565	MESSAGE RELATION, CODED	M 1	an..3	

USF KEY MANAGEMENT FUNCTION

Function: To specify the type of key management function and the status of a corresponding key or certificate.

	0338	Event date	C	n..8	
	0314	Event time	C	an..15	
	0336	Time offset	C	n4	

NOTES:

- 0541, if not present the default scope is the current security header segment group and the message body or object itself.

2. 0507, the original character set encoding of the EDIFACT structure when it was secured. If no value is specified, the character set encoding corresponds to that identified by the syntax identifier character repertoire in the UNB segment.
3. S500, two occurrences are possible: one for the security originator, one for the security recipient.
4. S500/0538, may be used to establish the key relationship between the sending and receiving parties.
5. S501, may be used as a security timestamp. It is security related and may differ from any dates and times that may appear elsewhere in the EDIFACT structure. It may be used to provide sequence integrity.

USL SECURITY LIST STATUS

Function: To specify the status of security objects, such as keys or certificates to be delivered in a list, and the corresponding list parameters.

Pos	TAG	Name	S R	Repr.	Notes

USR SECURITY RESULT

Function: To contain the result of the security mechanisms.

Pos	TAG	Name	S R	Repr.	Notes
010	S508	VALIDATION RESULT	M 2		1
	0563	Validation value qualifier	M	an..3	
	0560	Validation value	C	an..1024	

NOTES:

1. S508, two occurrences shall be used in the case of signature algorithms requiring two parameters to express the result.
In the case of an RSA signature, only one occurrence of S508 shall be used.

In the case of a DSA signature two occurrences of S508 shall be used.
-

UST SECURITY TRAILER

Function: To establish a link between security header and security trailer segment groups.

Pos	TAG	Name	S R	Repr.	Notes
010	0534	SECURITY REFERENCE NUMBER	M 1	an..14	1
020	0588	NUMBER OF SECURITY SEGMENTS	M 1	n..10	

NOTES:

1. 0534, the value shall be identical to the value in 0534 in the corresponding USH segment.

USU DATA ENCRYPTION TRAILER

Function: To provide a trailer for the encrypted data.

Pos	TAG	Name	S R	Repr.	Notes
010	0556	LENGTH OF DATA IN OCTETS OF BITS	M 1	n..18	1
020	0518	ENCRYPTION REFERENCE NUMBER	C 1	an..35	2

NOTES:

1. 0556, the value shall be identical to the value in 0556 in the corresponding USD segment.
2. 0518, the value shall be identical to the value in 0518 in the corresponding USD segment.

USX SECURITY REFERENCES

Function: To refer to the secured EDIFACT structure and its associated date and time.

Pos	TAG	Name	S R	Repr.	Notes
010	0020	INTERCHANGE CONTROL REFERENCE	M 1	an..14	
020	S002	INTERCHANGE SENDER	C 1		
	0004	Interchange sender identification	M	an..35

an..3	up to 3 alphanumeric characters																		
Desc.	Description of the composite data element																		

5.2.2 Dependency note identifiers

Code	Name
D1	One and only one
D2	All or none
D3	One or more
D4	One or none
D5	If first, then all
D6	If first, then at least one more
D7	If first, then none of the others

See clause 11.5 in ISO 9735-1:2002 for the definition of the dependency note identifiers.

5.2.3 Index of service composite data elements by tag

Change indicators (in comparison with ISO 9735-10 published in 2002)

a plus sign (+) for an addition
 an asterisk (*) for an amendment to structure
 a hash sign (#) for changes to names
 a vertical bar (|) for changes to text for descriptions,
 notes and functions
 a minus sign (-) for a deletion
 an X sign (X) for marked for deletion

Tag	Name
S001	Syntax identifier
S002	Interchange sender
S003	Interchange recipient
S004	Date and time of preparation
S005	Recipient reference/password details
S006	Application sender identification
S007	Application recipient identification
X S008	Message version
S009	Message identifier
S010	Status of the transfer
S011	Data element identification
S016	Message subset identification
S017	Message implementation guideline identification
S018	Scenario identification
S020	Reference identification
S021	Object type identification
S022	Status of the object
S300	Date and/or time of initiation
S301	Status of transfer - interactive
S302	Dialogue reference
S303	Transaction reference
S305	Dialogue identification
S306	Interactive message identifier
S307	Status information
S500	Security identification details
S501	Security date and time
S502	Security algorithm
S503	Algorithm parameter
S504	List parameter
S505	Service character for signature
S508	Validation result

5.2.4 Index of service composite data elements by name

Change indicators (in comparison with ISO 9735-10 published in 2002)

a plus sign (+) for an addition
 an asterisk (*) for an amendment to structure
 a hash sign (#) for changes to names
 a vertical bar (|) for changes to text for descriptions,
 notes and functions
 a minus sign (-) for a deletion
 an X sign (X) for marked for deletion

Tag	Name
S503	Algorithm parameter
S007	Application recipient identification
S006	Application sender identification
S011	Data element identification
S004	Date and time of preparation
S300	Date and/or time of initiation
S305	Dialogue identification
S302	Dialogue reference
S306	Interactive message identifier
S003	Interchange recipient
S002	Interchange sender
S504	List parameter
S009	Message identifier
S017	Message implementation guideline identification
S016	Message subset identification
X S008	Message version
S021	Object type identification
S005	Recipient reference/password details
S020	Reference identification
S018	Scenario identification

S501	Security date and time
S500	Security identification details
S505	Service character for signature
S307	Status information
S022	Status of the object
S010	Status of the transfer
S301	Status of transfer - interactive
S001	Syntax identifier
S303	Transaction reference
S508	Validation result

5.2.5 Service composite data element specifications

Change indicators (in comparison with ISO 9735-10 published in 2002)

a plus sign (+)	for an addition
an asterisk (*)	for an amendment to structure
a hash sign (#)	for changes to names
a vertical bar ()	for changes to text for descriptions, notes and functions
a minus sign (-)	for a deletion
an X sign (X)	for marked for deletion

S001 SYNTAX IDENTIFIER

Desc: Identification of the agency controlling the syntax, the syntax level and version number, and the service code directory.

POS	TAG	Name	S Repr.	Notes
010	0001	Syntax identifier	M a4	
020	0002	Syntax version number	M an1	
030	0080	Service code list directory version number	C an..6	
040	0133	Character encoding, coded	C an..3	
050	0076	Syntax release number	C an2	

S002 INTERCHANGE SENDER

Desc: Identification of the sender of the interchange.

POS	TAG	Name	S Repr.	Notes
010	0004	Interchange sender identification	M an..35	
020	0007	Identification code qualifier	C an..4	
030	0008	Interchange sender internal identification	C an..35	
040	0042	Interchange sender internal sub-identification	C an..35	

S003 INTERCHANGE RECIPIENT

Desc: Identification of the recipient of the interchange.

POS	TAG	Name	S Repr.	Notes
010	0010	Interchange recipient identification	M an..35	
020	0007	Identification code qualifier	C an..4	
030	0014	Interchange recipient internal identification	C an..35	
040	0046	Interchange recipient internal sub-identification	C an..35	

S004 DATE AND TIME OF PREPARATION

Desc: Date and time of preparation of the interchange.

POS	TAG	Name	S Repr.	Notes
010	0017	Date	M n8	
020	0019	Time	M n4	

S005 RECIPIENT REFERENCE/PASSWORD DETAILS

Desc: Reference or password as agreed between the communicating partners.

POS	TAG	Name	S Repr.	Notes
010	0022	Recipient reference/password	M an..14	
020	0025	Recipient reference/password qualifier	C an2	

S006 APPLICATION SENDER IDENTIFICATION

Desc: Sender identification of for example a division, branch or application computer system/process.

POS	TAG	Name	S Repr.	Notes
010	0040	Application sender identification	M an..35	
020	0007	Identification code qualifier	C an..4	

S007 APPLICATION RECIPIENT IDENTIFICATION

Desc: Recipient identification of for example a division, branch or application computer system/process.

POS	TAG	Name	S Repr.	Notes
010	0044	Application recipient identification	M an..35	
020	0007	Identification code qualifier	C an..4	

X S008 MESSAGE VERSION

Desc: Specification of the version and release numbers of all of the messages of a single type in the group.

POS	TAG	Name	S Repr.	Notes
010	0052	Message version number	M an..3	
020	0054	Message release number	M an..3	
030	0057	Association assigned code	C an..6	

S009 MESSAGE IDENTIFIER

Desc: Identification of the type, version, etc. of the message being interchanged.

POS	TAG	Name	S Repr.	Notes
010	0065	Message type	M an..6	
020	0052	Message version number	M an..3	
030	0054	Message release number	M an..3	
040	0051	Controlling agency, coded	M an..3	
050	0057	Association assigned code	C an..6	
060	0110	Code list directory version number	C an..6	
070	0113	Message type sub-function identification	C an..6	

S010 STATUS OF THE TRANSFER

Desc: Statement that the message is one in a sequence of transfers relating to the same topic.

POS	TAG	Name	S Repr.	Notes
010	0070	Sequence of transfers	M n..2	
020	0073	First and last transfer	C al	

S011 DATA ELEMENT IDENTIFICATION

Desc: Identification of the position for an erroneous data element. This can be the position of a stand-alone or composite data element in the definition of a segment or a component data element in the definition of a composite data element.

POS	TAG	Name	S Repr.	Notes
010	0098	Erroneous data element position in segment	M n..3	
020	0104	Erroneous component data element position	C n..3	1,2
030	0136	Erroneous data element occurrence	C n..6	1,3

DEPENDENCY NOTES:

1. D4(020, 030) One or none

OTHER NOTES:

2. 0104, only used if an error is to be reported in a component data element.
3. 0136, only used if an error is to be reported in a repeating data element.

S016 MESSAGE SUBSET IDENTIFICATION

Desc: Identification of a message subset by its identifier, version, release and source.

POS	TAG	Name	S Repr.	Notes
010	0115	Message subset identification	M an..14	
020	0116	Message subset version number	C an..3	
030	0118	Message subset release number	C an..3	
040	0051	Controlling agency, coded	C an..3	

S017 MESSAGE IMPLEMENTATION GUIDELINE IDENTIFICATION

Desc: Identification of a message implementation guideline by its identifier, version, release and source.

POS	TAG	Name	S Repr.	Notes
010	0121	Message implementation guideline identification	M an..14	
020	0122	Message implementation guideline version number	C an..3	
030	0124	Message implementation guideline release number	C an..3	
040	0051	Controlling agency, coded	C an..3	

S018 SCENARIO IDENTIFICATION

Desc: Identification of a scenario.

POS	TAG	Name	S Repr.	Notes
010	0127	Scenario identification	M an..14	
020	0128	Scenario version number	C an..3	
030	0130	Scenario release number	C an..3	
040	0051	Controlling agency, coded	C an..3	

S020 REFERENCE IDENTIFICATION

Desc: Identification of the reference relating to the object.

POS	TAG	Name	S Repr.	Notes
010	0813	Reference qualifier	M an..3	
020	0802	Reference identification number	M an..35	

S021 OBJECT TYPE IDENTIFICATION

Desc: Identification of the attribute related to the object type.

POS	TAG	Name	S Repr.	Notes
010	0805	Object type qualifier	M an..3	
020	0809	Object type attribute identification	C an..256	1
030	0808	Object type attribute	C an..256	1
040	0051	Controlling agency, coded	C an..3	

DEPENDENCY NOTES:

1. D3(020, 030) One or more

S022 STATUS OF THE OBJECT

Desc: Identification of the length and if required the transfer status of the object.

POS	TAG	Name	S Repr.	Notes
010	0810	Length of object in octets of bits	M n..18	
020	0814	Number of segments before object	C n..3	
030	0070	Sequence of transfers	C n..2	
040	0073	First and last transfer	C al	

S300 DATE AND/OR TIME OF INITIATION

Desc: Date and/or time of event initiation.

POS	TAG	Name	S Repr.	Notes
010	0338	Event date	C n..8	
020	0314	Event time	C an..15	1
030	0336	Time offset	C n4	1

DEPENDENCY NOTES:

1. D5(030, 020) If first, then all

S301 STATUS OF TRANSFER - INTERACTIVE

Desc: Identifies the sequence of the message/package within the sender's interchange and the position in a multi-message and/or package transfer.

POS	TAG	Name	S Repr.	Notes
010	0320	Sender sequence number	C n..6	1
020	0323	Transfer position, coded	C al	2
030	0325	Duplicate Indicator	C al	3

NOTES:

1. 0320, starts at 1 and is incremented by 1 for each message and package within the interchange.
2. 0323, only used where more than one message or package is contained in a single query or response.

3. 0325, only used if a duplicate transfer.

S302 DIALOGUE REFERENCE

Desc: Unique reference for the dialogue between co-operating parties within the interactive EDI transaction.

POS	TAG	Name	S Repr.	Notes
010	0300	Initiator control reference	M an..35	
020	0303	Initiator reference identification	C an..35	1
030	0051	Controlling agency, coded	C an..3	1
040	0304	Responder control reference	C an..35	

DEPENDENCY NOTES:

1. D5(030, 020) If first, then all

S303 TRANSACTION REFERENCE

Desc: Unique reference for the business transaction to which the dialogue belongs.

POS	TAG	Name	S Repr.	Notes
010	0306	Transaction control reference	M an..35	
020	0303	Initiator reference identification	C an..35	1
030	0051	Controlling agency, coded	C an..3	1

DEPENDENCY NOTES:

1. D5(030, 020) If first, then all

S305 DIALOGUE IDENTIFICATION

Desc: Identification of the dialogue type being used for the interactive EDI transaction.

POS	TAG	Name	S Repr.	Notes
010	0311	Dialogue identification	M an..14	
020	0342	Dialogue version number	C an..3	
030	0344	Dialogue release number	C an..3	
040	0051	Controlling agency, coded	C an..3	

S306 INTERACTIVE MESSAGE IDENTIFIER

Desc: Identification of the type, version and details of the message being interchanged.

POS	TAG	Name	S Repr.	Notes
010	0065	Message type	M an..6	
020	0052	Message version number	M an..3	
030	0054	Message release number	M an..3	
040	0113	Message type sub-function identification	C an..6	
050	0051	Controlling agency, coded	C an..3	
060	0057	Association assigned code	C an..6	

S307 STATUS INFORMATION

Desc: Reason for status or error report.

POS	TAG	Name	S Repr.	Notes
010	0333	Status, coded	C an..3	
020	0332	Status	C an..70	1,2
030	0335	Language, coded	C an..3	1

DEPENDENCY NOTES:

1. D5(030, 020) If first, then all

OTHER NOTES:

2. 0332, defaults to English in the absence of a value in 0335.

S500 SECURITY IDENTIFICATION DETAILS

Desc: Identification of parties involved in the security process.

POS	TAG	Name	S Repr.	Notes
010	0577	Security party qualifier	M an..3	
020	0538	Key name	C an..35	
030	0511	Security party identification	C an..1024	1
040	0513	Security party code list qualifier	C an..3	1
050	0515	Security party code list responsible agency, coded	C an..3	1
060	0586	Security party name	C an..35	
070	0586	Security party name	C an..35	
080	0586	Security party name	C an..35	

DEPENDENCY NOTES:

1. D2(030, 040, 050) All or none

S501 SECURITY DATE AND TIME

Desc: Security related date and time.

POS	TAG	Name	S Repr.	Notes
010	0517	Date and time qualifier	M an..3	
020	0338	Event date	C n..8	
030	0314	Event time	C an..15	
040	0336	Time offset	C n4	

S502 SECURITY ALGORITHM

Desc: Identification of a security algorithm.

POS	TAG	Name	S Repr.	Notes
010	0523	Use of algorithm, coded	M an..3	
020	0525	Cryptographic mode of operation, coded	C an..3	1,3,6
030	0533	Mode of operation code list identifier	C an..3	1

040	0527	Algorithm, coded	C an..3	2,3,5
050	0529	Algorithm code list identifier	C an..3	2
060	0591	Padding mechanism, coded	C an..3	4,5
070	0601	Padding mechanism code list identifier	C an..3	4

DEPENDENCY NOTES:

1. D5(030, 020) If first, then all
2. D5(050, 040) If first, then all
3. D5(020, 040) If first, then all
4. D5(070, 060) If first, then all
5. D5(060, 040) If first, then all

OTHER NOTES:

6. 0525, a mode of operation shall be chosen in relation to the chosen algorithm (data element 0527). Some combinations of mode of operation and algorithm are not appropriate.

S503 ALGORITHM PARAMETER

Desc: Parameter required by a security algorithm.

POS	TAG	Name	S Repr.	Notes
010	0531	Algorithm parameter qualifier	M an..3	
020	0554	Algorithm parameter value	M an..512	

S504 LIST PARAMETER

Desc: Identification of a parameter for a list request or delivery

POS	TAG	Name	S Repr.	Notes
010	0575	List parameter qualifier	M an..3	
020	0558	List parameter	M an..70	

S505 SERVICE CHARACTER FOR SIGNATURE

Desc: Identification of the characters used as syntactical service characters when a signature was computed.

POS	TAG	Name	S Repr.	Notes
010	0551	Service character for signature qualifier	M an..3	
020	0548	Service character for signature	M an..4	

S508 VALIDATION RESULT

Desc: Result of the application of the security mechanism.

POS	TAG	Name	S Repr.	Notes
010	0563	Validation value qualifier	M an..3	
020	0560	Validation value	C an..1024	1

NOTES:

1. 0560, the length of this data element shall be determined by the characteristics of the cryptographic algorithm used to compute the validation value and the filter function applied to the result.

5.3 Service simple data element directory

5.3.1 General

The syntax service code list directory forms part of the UN Trade Data Interchange Directory (UNTDID). The most recent UNTDID should be used to reference the code values for the coded data elements in the following simple data element directory.

5.3.2 Service simple data element specification legend:

Tag	The tags of all service simple data elements contained in the simple data element directory start with figure "0".
Name	Name of a simple data element
Desc.	Description of the simple data element
Repr.	Data value representation of the simple data element:
a	alphabetic characters
n	numeric characters
an	alphanumeric characters
a3	3 alphabetic characters, fixed length
n3	3 numeric characters, fixed length
an3	3 alphanumeric characters, fixed length
a..3	up to 3 alphabetic characters
n..3	up to 3 numeric characters
an..3	up to 3 alphanumeric characters

5.3.3 Index of service simple data elements by tag

Change indicators (in comparison with ISO 9735-10 published in 2002)

a plus sign (+)	for an addition

5.3.5 Service simple data element specifications

Change indicators (in comparison with ISO 9735-10 published in 2002)

a plus sign (+)	for an addition
an asterisk (*)	for an amendment to structure
a hash sign (#)	for changes to names
a vertical bar ()	for changes to text for descriptions, notes and functions
a minus sign (-)	for a deletion
an X sign (X)	for marked for deletion

0001 Syntax identifier

Desc: Coded identification of the agency controlling the syntax, and of the character repertoire used in an interchange.

Repr: a4

Note 1: The data value consists of the letters 'UN', upper case, identifying the syntax controlling agency, directly followed by an a2 code identifying the character repertoire used.

0002 Syntax version number

Desc: Version number of the syntax.

Repr: an1

Note 1: Shall be '4' to indicate this version of the syntax.

0004 Interchange sender identification

Desc: Name or coded identification of the sender of the interchange.

Repr: an..35

Note 1: Organisation code or name as agreed between interchange partners.

Note 2: If coded representation is used, its source may be specified by the qualifier in data element 0007.

0007 Identification code qualifier

Desc: Qualifier referring to the identification code.

Repr: an..4

Note 1: A qualifier code may refer to an organisation identification as in ISO 6523.

0008 Interchange sender internal identification

Desc: Identification (for example, a division, branch or computer system/process) specified by the sender of interchange, to be included if agreed, by the recipient in response interchanges, to facilitate internal routing.

Repr: an..35

0010 Interchange recipient identification

Desc: Name or coded identification of the recipient of the interchange.

Repr: an..35

Note 1: Organisation code or name as agreed between interchange partners.

Note 2: If coded representation is used, its source may be specified by the qualifier in data element 0007.

0014 Interchange recipient internal identification

Desc: Identification (for example, a division, branch or computer system/process) specified by the recipient of interchange, to be included if agreed, by the sender in response interchanges, to facilitate internal routing.

Repr: an..35

0017 Date

Desc: Local date when an interchange or a group was prepared.

Repr: n8

Note 1: Format is CCYYMMDD.

0019 Time

Desc: Local time of day when an interchange or a group was prepared.

Repr: n4

Note 1: Format is HHMM in 24 hour clock.

0020 Interchange control reference

Desc: Unique reference assigned by the sender to an interchange.

Repr: an..14

0022 Recipient reference/password

Desc: Reference or password to the recipient's system or to a third party network as specified in the partners' interchange agreement.

Repr: an..14

Note 1: To be used as specified in the partners' interchange agreement. It may be qualified by data element 0025.

0025 Recipient reference/password qualifier

Desc: Qualifier for the recipient's reference or password.

Repr: an2

Note 1: To be used as specified in the partners' interchange agreement.

0026 Application reference

Desc: Identification of the application area assigned by the sender, to which the messages in the interchange relate e.g. the message type, if all the messages in the interchange are of the same type.

Repr: an..14

Note 1: Identification of the application area (e.g. accounting, purchasing) or of the message type, as applicable.

0029 Processing priority code

Desc: Code determined by the sender requesting processing priority for the interchange.

Repr: a1

Note 1: To be used as specified in the partners' interchange agreement.

0031 Acknowledgement request

Desc: Code requesting acknowledgement for the interchange.

Repr: n1

Note 1: Used if the sender requests that a message related to syntactical correctness be sent by the recipient in response.

Note 2: For UN/EDIFACT a specific message (Syntax and service report - CONTRL) is defined for this purpose.

0032 Interchange agreement identifier

Desc: Identification by name or code of the type of agreement under which the interchange takes place.

Repr: an..35

Note 1: Name or code to be specified in the partners' interchange agreement.

0035 Test indicator

Desc: Indication that the structural level containing the test indicator is a test.

Repr: n1

0036 Interchange control count

Desc: The number of messages and packages in an interchange or, if used, the number of groups in an interchange.

Repr: n..6

X 0038 Message group identification

Desc: Identification of the single message type in the group.

Repr: an..6

Note 1: This data element will be deleted from the next version of the standard. Therefore its use is not recommended.

0040 Application sender identification

Desc: Name or coded identification of the application sender (for example, a division, branch or computer system/process).

Repr: an..35

0042 Interchange sender internal sub-identification

Desc: Sub-level of sender internal identification, when further sub-level identification is required.

Repr: an..35

0044 Application recipient identification

Desc: Name or coded identification of the application recipient (for example, a division, branch or computer system/process).

Repr: an..35

0046 Interchange recipient internal sub-identification

Desc: Sub-level of recipient internal identification, when further sub-level identification is required.

Repr: an..35

0048 Group reference number

Desc: Unique reference number for the group within an interchange.

Repr: an..14

0051 Controlling agency, coded

Desc: Code identifying a controlling agency.

Repr: an..3

0052 Message version number

Desc: Version number of a message type.

Repr: an..3

0054 Message release number

Desc: Release number within the current message version number.

Repr: an..3

0057 Association assigned code

Desc: Code, assigned by the association responsible for the design and maintenance of the message type concerned, which further identifies the message.

Repr: an..6

0058 Application password

Desc: Password to the recipient's division, department or sectional application system/process.

Repr: an..14

0060 Group control count

Desc: The number of messages and packages in the group.

Repr: n..6

0062 Message reference number

Desc: Unique message reference assigned by the sender.

Repr: an..14

0065 Message type

Desc: Code identifying a type of message and assigned by its controlling agency.

Repr: an..6

Note 1: In UNSMs (United Nations Standard Messages), the representation is a6.

0068 Common access reference

Desc: Reference serving as a key to relate all subsequent transfers of data to the same business case or file.

Repr: an..35

0070 Sequence of transfers

Desc: Number assigned by the sender indicating the transfer sequence of a message related to the same topic. The message could be an addition or a change to an earlier transfer related to the same topic.

Repr: n..2

Note 1: The first message in the sequence shall be assigned as number 1.

0073 First and last transfer

Desc: Indication used for the first and last message in a sequence of messages related to the same topic.

Repr: a1

0074 Number of segments in a message

Desc: The number of segments in a message body, plus the message header segment and message trailer segment.

Repr: n..10

0076 Syntax release number

Desc: The number of a syntax release (within an existing syntax version number).

Repr: an2

0080 Service code list directory version number

Desc: Version number of the service code list directory.

Repr: an..6

0081 Section identification

Desc: Identification of the separation of sections of a message.

Repr: a1

0083 Action, coded

Desc: A code indicating acknowledgement, or rejection (the action taken) of a subject interchange, or part of the subject interchange, or indication of interchange receipt.

Repr: an..3

0085 Syntax error, coded

Desc: A code indicating the error detected.

Repr: an..3

0087 Anti-collision segment group identification

Desc: To identify uniquely an anti-collision segment group in a message.

Repr: an..4

Note 1: The value of this data element shall be the segment group number of the UGH/UGT segment group as stated in the message specification.

0096 Segment position in message body

Desc: The numerical count position of a specific segment that is within the actual received message body. The numbering starts with, and includes, the UNH or the UIH segment as segment number 1. To identify a segment that contains an error, this is the numerical count position of that segment. To report that a segment is missing, this is the numerical count position of the last segment that was processed before the position where the missing segment was expected to be. A missing segment group is denoted by identifying the first segment in the group as missing.

Repr: n..6

0098 Erroneous data element position in segment

Desc: The numerical count position of the stand-alone or composite data element in error. The segment code and each following stand-alone or composite data element defined in the segment description shall cause the count to be incremented. The segment tag has position number 1.

Repr: n..3

0104 Erroneous component data element position

Desc: The numerical count position of the component data element in error. Each component data element position defined in the composite data element description shall cause the count to be incremented. The count starts at 1.

Repr: n..3

0110 Code list directory version number

Desc: Version number of the code list directory.

Repr: an..6

0113 Message type sub-function identification

Desc: Code identifying a sub-function of a message type.

Repr: an..6

Note 1: The code qualifies the message type data element (0065) to allow the recipient to identify a specific sub-function of a message.

0115 Message subset identification

Desc: Coded identification of a message subset, assigned by its controlling agency.

Repr: an..14

0116 Message subset version number

Desc: Version number of the message subset.

Repr: an..3

0118 Message subset release number

Desc: Release number within the message subset version number.

Repr: an..3

0121 Message implementation guideline identification

Desc: Coded identification of the message implementation guideline, assigned by its controlling agency.

Repr: an..14

0122 Message implementation guideline version number

Desc: Version number of the message implementation guideline.

Repr: an..3

0124 Message implementation guideline release number

Desc: Release number within the message implementation guideline version number.

Repr: an..3

0127 Scenario identification

Desc: Code identifying scenario.

Repr: an..14

0128 Scenario version number

Desc: Version number of a scenario.

Repr: an..3

0130 Scenario release number

Desc: Release number within the scenario version number.

Repr: an..3

0133 Character encoding, coded

Desc: Coded identification of the character encoding used in the interchange.

Repr: an..3

Note 1: To be used as specified in the partners' interchange agreement, for the purpose of identifying the character repertoire encoding technique used in the interchange (when the default encoding defined by the character repertoire's associated character set specification is not used).

0135 Service segment tag, coded

Desc: Code identifying a service segment.

Repr: an..3

0136 Erroneous data element occurrence

Desc: The numerical occurrence of the repeating stand-alone or composite data element in error. Each occurrence (as indicated by the repetition separator) shall cause the count to be incremented. The count starts at 1.

Repr: n..6

0138 Security segment position

Desc: The numerical count position of a specific security segment that is within the actual received security header/trailer segment group pair, identified by its security reference number. The numbering starts with, and includes, the USH segment as segment number 1. To identify a security segment that contains an error, this is the numerical count position of that security segment. To report that a security segment is missing, this is the numerical count position of the last security segment that was processed before the position where the missing security segment was expected to be. A missing security segment group is denoted by identifying the first segment in the security segment group as missing.

Repr: n..6

0300 Initiator control reference

Desc: A reference assigned by the dialogue initiator.

Repr: an..35

0303 Initiator reference identification

Desc: Organisation code or name assigned by the party that initiated the transaction or dialogue.

Repr: an..35

0304 Responder control reference

Desc: A reference assigned by the dialogue responder.

Repr: an..35

0306 Transaction control reference

Desc: A reference assigned by the transaction initiator.

Repr: an..35

0311 Dialogue identification

Desc: Code identifying a dialogue.

Repr: an..14

0314 Event time

Desc: Time of event.

Repr: an..15

Note 1: Format is HHMMSS ... with up to 9 more digits of precision. A 'Z' as the last character indicates UTC time. (ISO 8601)

0320 Sender sequence number

Desc: Identification of the sequence number of the message or package within the sender interchange.

Repr: n..6

0323 Transfer position, coded

Desc: Indication of the position of a transfer.

Repr: a1

0325 Duplicate Indicator

Desc: Indication that the structure is a duplicate of a previously sent structure.

Repr: a1

0331 Report function, coded

Desc: Coded value identifying type of status or error report.

Repr: an..3

0332 Status

Desc: Textual explanation of the reason for the status or error report.

Repr: an..70

0333 Status, coded

Desc: Code identifying the reason for the status or error report.

Repr: an..3

0335 Language, coded

| Desc: Code identifying the language used.

Repr: an..3

Note 1: The code list for this data element is maintained by ISO (ISO 639).

0336 Time offset

Desc: UTC (Universal Co-ordinated Time) offset from event time.

Repr: n4

Note 1: Format is HHMM. Shall be prefixed with '-' for negative offsets.
(ISO 8601)

0338 Event date

Desc: Date of event.

Repr: n..8

Note 1: Format is YYYYMMDD or CCYYYYMMDD.

0340 Interactive message reference number

Desc: Unique interactive message reference assigned by the sender.

Repr: an..35

0342 Dialogue version number

Desc: Version number of a dialogue.

Repr: an..3

0344 Dialogue release number

Desc: Release number of a dialogue.

Repr: an..3

0501 Security service, coded

Desc: Specification of the security service applied.

Repr: an..3

0503 Response type, coded

Desc: Specification of the type of response expected from the recipient.

Repr: an..3

0505 Filter function, coded

Desc: Identification of the filtering function used to reversibly map any bit pattern on to a restricted character set.

Repr: an..3

0507 Original character set encoding, coded

Desc: Identification of the character set in which the secured EDIFACT structure was encoded when security mechanisms were applied.

Repr: an..3

0509 Role of security provider, coded

Desc: Identification of the role of the security provider in relation to the secured item.

Repr: an..3

0511 Security party identification

Desc: Identification of a party involved in the security process, according to a defined registry of security parties.

Repr: an..1024

0513 Security party code list qualifier

Desc: Identification of the type of identification used to register the security parties.

Repr: an..3

0515 Security party code list responsible agency, coded

Desc: Identification of the agency in charge of registration of the security parties.

Repr: an..3

0517 Date and time qualifier

Desc: Specification of the type of date and time.

Repr: an..3

0518 Encryption reference number

Desc: Reference number to the encrypted EDIFACT structure.

Repr: an..35

0520 Security sequence number

Desc: Sequence number assigned to the EDIFACT structure to which security is applied.

Repr: an..35

Note 1: This sequence number is security related and may differ from the identification of the EDIFACT structure that may appear elsewhere. It may be used when sequence integrity is required.

0523 Use of algorithm, coded

Desc: Specification of the usage made of the algorithm.

Repr: an..3

0525 Cryptographic mode of operation, coded

Desc: Specification of the mode of operation used for the algorithm.

Repr: an..3

0527 Algorithm, coded

Desc: Identification of the algorithm.

Repr: an..3

0529 Algorithm code list identifier

Desc: Specification of the code list used to identify the algorithm.

Repr: an..3

0531 Algorithm parameter qualifier

Desc: Specification of the type of parameter value.

Repr: an..3

0533 Mode of operation code list identifier

Desc: Specification of the code list used to identify the cryptographic mode of operation.

Repr: an..3

0534 Security reference number

Desc: Unique reference number assigned by the security originator to a pair of security header and security trailer groups.

Repr: an..14

Note 1: The value shall be arbitrarily assigned, but the same value shall not be used more than once within the same EDIFACT structure, I.e. interchange, group, message or package.

* 0536 Certificate reference

Desc: Identifies one certificate for a certification authority.

Repr: an..70

0538 Key name

Desc: Name used to establish a key relationship between the parties.

Repr: an..35

0541 Scope of security application, coded

Desc: Specification of the scope of application of the security service defined in the security header.

Repr: an..3

Note 1: It defines the data that have to be taken into account by the related cryptographic process.

0543 Certificate original character set repertoire, coded

Desc: Identification of the character set repertoire used to create the certificate it was signed.

Repr: an..3

0545 Certificate syntax and version, coded

Desc: Coded identification of the syntax and version used to create the certificate.

Repr: an..3

0546 User authorisation level

Desc: Specification of the authorisation level associated with the owner of the certificate.

Repr: an..35

0548 Service character for signature

Desc: Service character used when the signature was computed.

Repr: an..4

Note 1: In order to avoid translator problems, this service character is represented by its value in the character set identified by the original character set encoding data element (0507), hexa-filtered on, at least, two characters. For example the service character "'" is coded "27" (two characters), if ASCII 8bit code page is used.

0551 Service character for signature qualifier

Desc: Identification of the type of service character used when the signature was computed.

Repr: an..3

0554 Algorithm parameter value

Desc: Value of a parameter required by the algorithm.

Repr: an..512

Note 1: If necessary, this value shall be filtered by an appropriate filter function. Note that key names do not need to be filtered.

0556 Length of data in octets of bits

Desc: A count of the data octets of bits.

Repr: n..18

0558 List parameter

Desc: Specification of the list requested or delivered.

Repr: an..70

0560 Validation value

Desc: Security result corresponding to the security function specified.

Repr: an..1024

Note 1: If necessary, this value shall be filtered by an appropriate filter function.

0563 Validation value qualifier

Desc: Identification of the type of validation value.

Repr: an..3

0565 Message relation, coded

Desc: Relationship with another message, past or future.

Repr: an..3

0567 Security status, coded

Desc: Identification of the security element (key or certificate, for instance) status.

Repr: an..3

0569 Revocation reason, coded

Desc: Identification of the reason why the certificate has been revoked.

Repr: an..3

0571 Security error, coded

Desc: Identifies the security error causing the rejection of the EDIFACT structure.

Repr: an..3

Note 1: This element shall specify the security error encountered. These may be the reason for non-acknowledgement by a request for secure acknowledgement, or may be sent on the initiative of the receiver of an AUTACK or secured EDIFACT structure which contains error.

0572 Certificate sequence number

Desc: Specification of a certificate's position within a certification path.

Repr: n..4

Note 1: Allows certification paths to be ordered by specifying the ordinal number of the certificate within a certification path.

0575 List parameter qualifier

Desc: Specification of the type of list parameter.

Repr: an..3

0577 Security party qualifier

Desc: Identification of the role of the security party.

Repr: an..3

0579 Key management function qualifier

Desc: Specification of the type of key management function.

Repr: an..3

0582 Number of padding bytes

Desc: Count of the number of padding bytes.

Repr: n..2

0586 Security party name

Desc: Name of the security party.

Repr: an..35

0588 Number of security segments

Desc: The number of security segments in a security header/trailer group pair, plus the USD and USU segments where the security header/trailer group pair is used for encryption.

Repr: n..10

Note 1: Each security header/trailer group pair shall contain its own count of the number of security segments within that group pair.

Note 2: The count of the number of security segments includes the USR segment in the security trailer.

0591 Padding mechanism, coded

Desc: Padding mechanism or padding scheme applied.

Repr: an..3

0601 Padding mechanism code list identifier

Desc: Specification of the code list used to identify the padding mechanism or padding scheme.

Repr: an..3

0800 Package reference number

Desc: Unique package reference number assigned by the sender.

Repr: an..35

0802 Reference identification number

Desc: Reference number to identify a message, message group and/or interchange, which relates to the object.

Repr: an..35

0805 Object type qualifier

Desc: Qualifier referring to the type of object.

Repr: an..3

0808 Object type attribute

Desc: The attribute applying to the object type.

Repr: an..256

0809 Object type attribute identification

Desc: Coded identification of the attribute applying to the object type.

Repr: an..256

0810 Length of object in octets of bits

Desc: Count of the number of octets of bits in the object.

Repr: n..18

Note 1: The count shall exclude the segment terminator of the preceding EDIFACT structured segment and the first character ('U') of the following EDIFACT structured segment.

0813 Reference qualifier

Desc: Code giving specific meaning to a reference identification number.

Repr: an..3

0814 Number of segments before object

Desc: A count of the number of segments appearing between the UNO segment and the start of the object.

Repr: n..3

6 Syntax service code list directory

The syntax service code list directory is maintained by the UN/CEFACT and is part of the UN Trade Data Interchange Directory (UNTDID) and as such is not reproduced in this part of ISO 9735. The most recent version of the syntax service code list directory should be used to reference the code values for the coded data elements in the service simple data element directory (see 5.3).

The syntax service code list directory can be downloaded from the Joint Syntax Working Group web site at <www.gefeg.com/jswg>. To assist users of the ISO 9735 standard however, a 'snapshot' of the syntax service code list directory current at the time of preparation of this part of ISO 9735 has been included as informative annex A within this part.

Annex A (informative)

‘Snapshot’ of the syntax service code list directory

A.1 General

In order to illustrate the usage of the coded data elements shown in the service simple data elements directory, there follows a ‘snapshot’ of the current release 40200 of the ISO 9735, version 4, release 2, syntax service code list directory.

The syntax service code list directory is maintained by the Joint Syntax Working Group. Currently, the directory is updated bi-annually at the same time as the UN/CEFACT user directory set.

The ISO 9735 syntax service code list directory is published on the JSWG web site <www.gefeg.com/jswg>.

A.2 Code lists

Change indicators (in comparison with release 40110 of the syntax service code list)

a plus sign (+)	for an addition
an asterisk (*)	for an addition/subtraction/change to an entry for a particular data element
a hash sign (#)	for changes to names
a vertical bar ()	for changes to text for descriptions, notes and functions
an X sign (X)	for marked for deletion

0001 Syntax identifier

Desc: Coded identification of the agency controlling the syntax, and of the character repertoire used in an interchange.

Repr: a4

Note 1: The data value consists of the letters 'UN', upper case, identifying the syntax controlling agency, directly followed by an a2 code identifying the character repertoire used.

UNOA UN/ECE level A

As defined in the basic code table of ISO 646 with the exceptions of lower case letters, alternative graphic character allocations and national or application-oriented graphic character allocations.

UNOB UN/ECE level B

As defined in the basic code table of ISO 646 with the exceptions of alternative graphic character allocations and national or application-oriented graphic character allocations.

UNOC	UN/ECE level C As defined in ISO/IEC 8859-1 : Information processing - Part 1: Latin alphabet No. 1.
UNOD	UN/ECE level D As defined in ISO/IEC 8859-2 : Information processing - Part 2: Latin alphabet No. 2.
UNOE	UN/ECE level E As defined in ISO/IEC 8859-5 : Information processing - Part 5: Latin/Cyrillic alphabet.
UNOF	UN/ECE level F As defined in ISO 8859-7 : Information processing - Part 7: Latin/Greek alphabet.
UNOG	UN/ECE level G As defined in ISO/IEC 8859-3 : Information processing - Part 3: Latin alphabet No. 3.
UNOH	UN/ECE level H As defined in ISO/IEC 8859-4 : Information processing - Part 4: Latin alphabet No. 4.
UNOI	UN/ECE level I As defined in ISO/IEC 8859-6 : Information processing - Part 6: Latin/Arabic alphabet.
UNOJ	UN/ECE level J As defined in ISO/IEC 8859-8 : Information processing - Part 8: Latin/Hebrew alphabet.
UNOK	UN/ECE level K As defined in ISO/IEC 8859-9 : Information processing - Part 9: Latin alphabet No. 5.
UNOL	UN/ECE level L As defined in ISO/IEC 8859-15 : Information processing - Part 15: Latin alphabet No. 9.
UNOX	UN/ECE level X Code extension technique as defined by ISO 2022 utilising the escape techniques in accordance with ISO 2375.
UNOY	UN/ECE level Y ISO 10646-1 octet without code extension technique.
UNOW	UN/ECE level W ISO 10646-1 octet with code extension technique to support UTF-8 (UCS Transformation Format, 8 bit) encoding.

0002 Syntax version number

Desc: Version number of the syntax.

Repr: an1

Note 1: Shall be '4' to indicate this version of the syntax.

1 Version 1
ISO 9735:1988.

- 2 Version 2
 ISO 9735:1990.
- 3 Version 3
 ISO 9735 Amendment 1:1992.
- 4 Version 4
 ISO 9735:1998.

0007 Identification code qualifier

Desc: Qualifier referring to the identification code.

Repr: an..4

Note 1: A qualifier code may refer to an organisation identification as in ISO 6523.

- 1 DUNS (Data Universal Numbering System)
 Partner identification code assigned by Dun & Bradstreet.
- 4 IATA (International Air Transport Association)
 Partner identification code assigned by the International
 Air Transport Association.
- 5 INSEE (Institut National de la Statistique et des Etudes
Economiques) - SIRET
 French national statistics institute. SIRET means Systeme
 Informatique du Repertoire des entreprises et de leurs
 Etablissements.
- 8 UCC Communications ID (Uniform Code Council Communications
Identifier)
 The Uniform Code Council Communications Identifier is a
 ten digit code used to uniquely identify physical and
 logical locations.
- 9 DUNS (Data Universal Numbering System) with 4 digit suffix
 Partner identification code assigned by Dun & Bradstreet
 with the 4 digit suffix.
- 12 Telephone number
 Partner identification code corresponds to the partner
 telephone number.
- 14 GS1
 Partner identification code assigned by GS1, an international
 Organization of GS1 Member Organizations that manages the
 GS1 system.
- 18 AIAG (Automotive Industry Action Group)
 Partner identification code assigned by the Automotive
 Industry Action Group.
- 22 INSEE (Institut National de la Statistique et des Etudes
Economiques) - SIREN
 French national statistics institute. SIREN means Systeme
 Informatique du Repertoire des ENTreprises (et de leurs
 etablissements).
- 30 ISO 6523: Organization identification
 Partner identification code specified in ISO 6523
 (Structures for the identification of organizations).
- 31 DIN (Deutsches Institut fuer Normung)
 German standardization institute.
- 33 BfA (Bundesversicherungsanstalt fuer Angestellte)
 German social security association.
- 34 National Statistical Agency
 Partner identification code assigned by a national
 statistical agency.

- 51 GEIS (General Electric Information Services)
Partner identification code assigned by General Electric Information Services.
- 52 INS (IBM Network Services)
Partner identification code assigned by IBM Network Services.
- 53 Datenzentrale des Einzelhandels
German data centre for retail trade.
- 54 Bundesverband der Deutschen Baustoffhaendler
German building material trade association.
- 55 Bank identifier code
Partner identification code corresponds to the partner bank identification code.
- 57 KTNNet (Korea Trade Network Services)
Partner identification code assigned by Korea Trade Network Services.
- 58 UPU (Universal Postal Union)
Partner identification code assigned by the Universal Postal Union.
- 59 ODETTE (Organization for Data Exchange through Tele-Transmission in Europe)
European automotive industry project.
- 61 SCAC (Standard Carrier Alpha Code)
Directory of standard multimodal carriers and tariff agent codes. The SCAC lists and codes transportation companies.
- 63 ECA (Electronic Commerce Australia)
Australian association for electronic commerce.
- 65 TELEBOX 400 (Deutsche Telekom)
German telecommunications service.
- 80 NHS (National Health Service)
United Kingdom National Health Service.
- 82 Statens Teleforvaltning
Norwegian telecommunications regulatory authority (NTRA).
- 84 Athens Chamber of Commerce
Greek Chamber of Commerce.
- 85 Swiss Chamber of Commerce
Swiss Chamber of Commerce.
- 86 US Council for International Business
United States Council for International Business.
- 87 National Federation of Chambers of Commerce and Industry
Belgium National Federation of Chambers of Commerce and Industry.
- 89 Association of British Chambers of Commerce
Association of British Chambers of Commerce.
- 90 SITA (Societe Internationale de Telecommunications Aeronautiques)
SITA (Societe Internationale de Telecommunications Aeronautiques).
- 91 Assigned by seller or seller's agent
Partner identification code assigned by the seller or seller's agent.
- 92 Assigned by buyer or buyer's agent
Partner identification code assigned by the buyer or buyer's agent.
- 103 TW, Trade-van
Trade-van is an EDI VAN service center for customs, transport, and insurance in national and international trade.

128	CH, BCNR (Swiss Clearing Bank Number) Code for the identification of a Swiss clearing bank as a sender and/or receiver of an electronic message.
129	CH, BPI (Swiss Business Partner Identification) Code for the identification of a corporate or a Swiss non-clearing bank as a sender and/or receiver of an electronic message.
144	US, DoDAAC (Department of Defense Activity Address Code) Code assigned to uniquely identify all military units in the United States Department of Defense.
145	FR, DGCP (Direction Generale de la Comptabilite Publique) Code assigned by the French public accounting office.
146	FR, DGI (Direction Generale des Impots) Code assigned by the French taxation authority.
147	JP, JIPDEC/ECPC (Japan Information Processing Development Corporation / Electronic Commerce Promotion Center) Partner identification code which is registered with JIPDEC/ECPC.
148	ITU (International Telecommunications Union) Data Network Identification Code (DNIC) Data network identification code assigned by the ITU.
500	DE, BDEW (Bundesverband der Energie- und Wasserwirtschaft e.V.) The Federal Association of Energy and Water (BDEW) is the trade association of the German industries for natural gas, electricity supply, long-distance heating and water supply.
501	EASEE-gas (European Association for the Streamlining of Energy Exchange) Partner identification code which is registered with EASEE-gas.
Z01	Vehicle registration number Registration number of a vehicle assigned by a recognised authority.
ZZZ	Mutually defined Mutually defined between trading partners.

0025 Recipient reference/password qualifier

Desc: Qualifier for the recipient's reference or password.

Repr: an2

Note 1: To be used as specified in the partners' interchange agreement.

AA Reference
Recipient's reference/password is a reference.

BB Password
Recipient's reference/password is a password.

0029 Processing priority code

Desc: Code determined by the sender requesting processing priority for the interchange.

Repr: a1

Note 1: To be used as specified in the partners' interchange agreement.

- A Highest priority
 Requested processing priority is the highest.

0031 Acknowledgement request

Desc: Code requesting acknowledgement for the interchange.

Repr: n1

Note 1: Used if the sender requests that a message related to syntactical correctness be sent by the recipient in response.

Note 2: For UN/EDIFACT a specific message (Syntax and service report - CONTRL) is defined for this purpose.

- 1 Acknowledgement requested
 Acknowledgement is requested.
- 2 Indication of receipt
 Confirmation of receipt only.

0035 Test indicator

Desc: Indication that the structural level containing the test indicator is a test.

Repr: n1

- 1 Interchange is a test
 Indicates that the interchange is a test.
- 2 Syntax only test
 Test only syntax of structure.
- 3 Echo request
 To be returned without change, except for this data element to have the value 4.
- 4 Echo response
 Returned without change except for this data element changing from 3 to 4.
- 5 Interchange is a service provider test
 Indicates that this interchange is a test with a service provider.

0051 Controlling agency, coded

Desc: Code identifying a controlling agency.

Repr: an..3

- AA EDICONSTRUCT
 French construction project.
- AB DIN (Deutsches Institut fuer Normung)
 German standardization institute.
- AC ICS (International Chamber of Shipping)
 The International Chamber of Shipping.

AD	UPU (Union Postale Universelle) Universal Postal Union.
AE	United Kingdom ANA (Article Numbering Association) Identifies the Article Numbering Association of the United Kingdom.
AF	ANSI ASC X12 (American National Standard Institute Accredited Standards Committee X12) Identifies the United States electronic data interchange standards body.
AG	US DoD (United States Department of Defense) The United States Department of Defense is the entity controlling the message specification.
AH	US Federal Government The United States Federal Government is the entity controlling the message specification.
AI	EDIFICAS European EDI association for financial, informational, cost, accounting, auditing and social areas.
CC	CCC (Customs Co-operation Council) The Customs Co-operation Council.
CE	CEFIC (Conseil Europeen des Federations de l'Industrie Chimique) EDI project for chemical industry.
EC	EDICON UK Construction project.
ED	EDIFICE (Electronic industries project) EDI Forum for companies with Interest in Computing and Electronics (EDI project for EDP/ADP sector).
EE	EC + EFTA (European Communities and European Free Trade Association) The European Communities and the European Free Trade Association.
EN	GS1 Partner identification code assigned by GS1, an international organization of GS1 Member Organization that manages the GS1 System.
ER	UIC (International Union of railways) European railways.
EU	European Union The European Union.
EW	UN/EDIFACT Working Group (EWG) United Nations working group responsible for UN/EDIFACT (United Nations, Electronic Data Interchange for Administration, Commerce and Transport).
EX	IECC (International Express Carriers Conference) The International Express Carriers Conference.
IA	IATA (International Air Transport Association) The International Air Transport Association.
KE	KEC (Korea EDIFACT Committee) The Korea EDIFACT Committee.
LI	LIMNET UK Insurance project.
OD	ODETTE (Organization for Data Exchange through Tele-Transmission in Europe) European automotive industry project.
RI	RINET (Reinsurance and Insurance Network) The Reinsurance and Insurance Network.

 United Nations Centre for Trade Facilitation and
 Electronic Business (UN/CEFACT).

0052 Message version number

Desc: Version number of a message type.

Repr: an..3

- 1 Status 1 version
 Message approved and issued as a status 1 (trial)
 message. (Valid for directories published after March
 1990 and prior to March 1993).
 - 2 Status 2 version
 Message approved and issued as a status 2 (formal
 recommendation) message. (Valid for directories published
 after March 1990 and prior to March 1993).
 - 4 Service message, version 4
 Service messages approved and issued as a part of ISO
 9735/Version 4, for use with that version of the syntax.
- Note:
- 1. For earlier versions of the UN/EDIFACT CONTRL message,
 each published by the UN as a stand-alone message, the
 version number to be used is specified in the message
 documentation.
- 88 1988 version
 Message approved and issued in the 1988 release of the
 UNTDID (United Nations Trade Data Interchange Directory)
 as a status 2 (formal recommendation) message.
 - 89 1989 version
 Message approved and issued in the 1989 release of the
 UNTDID (United Nations Trade Data Interchange Directory)
 as a status 2 (formal recommendation) message.
 - 90 1990 version
 Message approved and issued in the 1990 release of the
 UNTDID (United Nations Trade Data Interchange Directory)
 as a status 2 (formal recommendation) message.
 - D Draft version/UN/EDIFACT Directory
 Message approved and issued as a draft message (Valid for
 directories published after March 1993 and prior to March
 1997). Message approved as a standard message (Valid for
 directories published after March 1997).
 - S Standard version
 Message approved and issued as a standard message. (Valid
 for directories published after March 1993 and prior to
 March 1997).

* 0054 Message release number

Desc: Release number within the current message version number.

Repr: an..3

- 1 First release
User message approved and issued in the first release of the year of the UNTDID (United Nations Trade Data Interchange Directory); valid for directories published prior to March 1990. Service message approved and issued as the first release of the message within a version of ISO 9735; valid for version 4 of ISO 9735 and later.
- 2 Second release
User message approved and issued in the second release of the year of the UNTDID (United Nations Trade Data Interchange Directory); valid for directories published prior to March 1990. Service message approved and issued as the second release of the message within a version of ISO 9735; valid for version 4 of ISO 9735 and later.
- 902 Trial release 1990
Message approved and issued in the 1990 status 1 (trial) release of the UNTDID (United Nations Trade Data Interchange Directory).
- 911 Trial release 1991
Message approved and issued in the 1991 status 1 (trial) release of the UNTDID (United Nations Trade Data Interchange Directory).
- 912 Standard release 1991
Message approved and issued in the 1991 status 2 (standard) release of the UNTDID (United Nations Trade Data Interchange Directory).
- 921 Trial release 1992
Message approved and issued in the 1992 status 1 (trial) release of the UNTDID (United Nations Trade Data Interchange Directory).
- 932 Standard release 1993
Message approved and issued in the 1993 status 2 (standard) release of the UNTDID (United Nations Trade Data Interchange Directory).
- 00A Release 2000 - A
Message approved and issued in the first 2000 release of the UNTDID (United Nations Trade Data Interchange Directory).
- 00B Release 2000 - B
Message approved and issued in the second 2000 release of the UNTDID (United Nations Trade Data Interchange Directory).
- 01A Release 2001 - A
Message approved and issued in the first 2001 release of the UNTDID (United Nations Trade Data Interchange Directory).
- 01B Release 2001 - B
Message approved and issued in the second 2001 release of the UNTDID (United Nations Trade Data Interchange Directory).
- 01C Release 2001 - C
Message approved and issued in the third 2001 release of the UNTDID (United Nations Trade Data Interchange Directory).

- 02A Release 2002 - A
Message approved and issued in the first 2002 release of the UNTDID (United Nations Trade Data Interchange Directory).

Message approved and issued in the second 1998 release of the UNTDID (United Nations Trade Data Interchange Directory).
- 99A Release 1999 - A
Message approved and issued in the first 1999 release of the UNTDID (United Nations Trade Data Interchange Directory).
- 99B Release 1999 - B
Message approved and issued in the second 1999 release of the UNTDID (United Nations Trade Data Interchange Directory).

0065 Message type

Desc: Code identifying a type of message and assigned by its controlling agency.

Repr: an..6

Note 1: In UNSMs (United Nations Standard Messages), the representation is a6.

- APERAK Application error and acknowledgement message
A code to identify the application error and acknowledgement message.
- AUTACK Secure authentication and acknowledgement message
A code to identify the secure authentication and acknowledgement message.
- AUTHOR Authorization message
A code to identify the authorization message.
- AVLREQ Availability request - interactive message
A code to identify the availability request - interactive message.
- AVLRSP Availability response - interactive message
A code to identify the availability response - interactive message.
- BALANC Balance message
A code to identify the balance message.
- BANSTA Banking status message
A code to identify the banking status message.
- BAPLIE Bayplan/stowage plan occupied and empty locations message
A code to identify the bayplan/stowage plan occupied and empty locations message.
- BERMAN Berth management message
A code to identify the berth management message.
- BMISRM Bulk marine inspection summary report message
A code to identify the bulk marine inspection summary report message.
- BOPBNK Bank transactions and portfolio transactions report message
A code to identify the bank transactions and portfolio transactions report message.
- BOPCUS Balance of payment customer transaction report message
A code to identify the balance of payment customer transaction report message.

BOPDIR Direct balance of payment declaration message
A code to identify the direct balance of payment declaration message.

BOPINF Balance of payment information from customer message
A code to identify the balance of payment information from customer message.

BUSCRD Business credit report message
A code to identify the business credit report message.

CALINF Vessel call information message
A code to identify the vessel call information message.

CASINT Request for legal administration action in civil proceedings message
A code to identify the request for legal administration action in civil proceedings message.

CASRES Legal administration response in civil proceedings message
A code to identify the legal administration response in civil proceedings message.

CHACCO Chart of accounts message
A code to identify the chart of accounts message.

CLASET Classification information set message
A code to identify the classification information set message.

CNTCND Contractual conditions message
A code to identify the contractual conditions message.

COACSU Commercial account summary message
A code to identify the commercial account summary message.

COARRI Container discharge/loading report message
A code to identify the container discharge/loading report message.

CODECO Container gate-in/gate-out report message
A code to identify the container gate-in/gate-out report message.

CODENO Permit expiration/clearance ready notice message
A code to identify the permit expiration/clearance ready notice message.

COEDOR Container stock report message
A code to identify the container stock report message.

COHAOR Container special handling order message
A code to identify the container special handling order message.

COLREQ Request for a documentary collection message
A code to identify the request for a documentary collection message.

COMDIS Commercial dispute message
A code to identify the commercial dispute message.

CONAPW Advice on pending works message
A code to identify the advice on pending works message.

CONDPV Direct payment valuation message
A code to identify the direct payment valuation message.

CONDRA Drawing administration message
A code to identify the drawing administration message.

CONDRO Drawing organisation message
A code to identify the drawing organisation message.

CONEST Establishment of contract message
A code to identify the establishment of contract message.

CONITT Invitation to tender message
A code to identify the invitation to tender message.

CONPVA Payment valuation message
A code to identify the payment valuation message.

CONQVA Quantity valuation message
A code to identify the quantity valuation message.

CONRPW Response of pending works message
A code to identify the response of pending works message.

CONTEN Tender message
A code to identify the tender message.

CONTRL Syntax and service report message
A code to identify the syntax and service report message.

CONWQD Work item quantity determination message
A code to identify the work item quantity determination message.

COPARN Container announcement message
A code to identify the container announcement message.

COPAYM Contributions for payment
A code to identify the contributions for payment.

COPINO Container pre-notification message
A code to identify the container pre-notification message.

COPRAR Container discharge/loading order message
A code to identify the container discharge/loading order message.

COREOR Container release order message
A code to identify the container release order message.

COSTCO Container stuffing/stripping confirmation message
A code to identify the container stuffing/stripping confirmation message.

COSTOR Container stuffing/stripping order message
A code to identify the container stuffing/stripping order message.

CREADV Credit advice message
A code to identify the credit advice message.

CREEXT Extended credit advice message
A code to identify the extended credit advice message.

CREMUL Multiple credit advice message
A code to identify the multiple credit advice message.

CUSCAR Customs cargo report message
A code to identify the customs cargo report message.

CUSDEC Customs declaration message
A code to identify the customs declaration message.

CUSEXP Customs express consignment declaration message
A code to identify the customs express consignment declaration message.

CUSPED Periodic customs declaration message
A code to identify the periodic customs declaration message.

CUSREP Customs conveyance report message
A code to identify the customs conveyance report message.

CUSRES Customs response message
A code to identify the customs response message.

DEBADV Debit advice message
A code to identify the debit advice message.

DEBMUL Multiple debit advice message
A code to identify the multiple debit advice message.

DEBREC Debts recovery message
A code to identify the debts recovery message.

DELFOR Delivery schedule message
A code to identify the delivery schedule message.

DELJIT Delivery just in time message
A code to identify the delivery just in time message.

DESADV Despatch advice message
A code to identify the despatch advice message.

DESTIM Equipment damage and repair estimate message
A code to identify the equipment damage and repair estimate message.

DGRECA Dangerous goods recapitulation message
A code to identify the dangerous goods recapitulation message.

DIRDEB Direct debit message
A code to identify the direct debit message.

DIRDEF Directory definition message
A code to identify the directory definition message.

DMRDEF Data maintenance request definition message
A code to identify the data maintenance request definition message.

DMSTAT Data maintenance status report/query message
A code to identify the data maintenance status report/query message.

DOCADV Documentary credit advice message
A code to identify the documentary credit advice message.

DOCAMA Advice of an amendment of a documentary credit message
A code to identify the advice of an amendment of a documentary credit message.

DOCAMI Documentary credit amendment information message
A code to identify the documentary credit amendment information message.

DOCAMR Request for an amendment of a documentary credit message
A code to identify the request for an amendment of a documentary credit message.

DOCAPP Documentary credit application message
A code to identify the documentary credit application message.

DOCARE Response to an amendment of a documentary credit message
A code to identify the response to an amendment of a documentary credit message.

DOCINF Documentary credit issuance information message
A code to identify the documentary credit issuance information message.

ENTREC Accounting entries message
A code to identify the accounting entries message.

FINCAN Financial cancellation message
A code to identify the financial cancellation message.

FINPAY Multiple interbank funds transfer message
A code to identify the multiple interbank funds transfer message.

FINSTA Financial statement of an account message
A code to identify the financial statement of an account message.

GENRAL General purpose message
A code to identify the general purpose message.

GESMES Generic statistical message
A code to identify the generic statistical message.

GOVCBR Government cross border regulatory message
A code to identify the government cross border regulatory Message.

HANMOV Cargo/goods handling and movement message
A code to identify the cargo/goods handling and movement message.

ICASRP Insurance claim assessment and reporting message
A code to identify the insurance claim assessment and reporting message.

ICSOLI Insurance claim solicitor's instruction message
A code to identify the insurance claim solicitor's instruction message.

IFCSUM Forwarding and consolidation summary message
A code to identify the forwarding and consolidation summary message.

IFTCCA Forwarding and transport shipment charge calculation message
A code to identify the forwarding and transport shipment charge calculation message.

IFTDGN Dangerous goods notification message
A code to identify the dangerous goods notification message.

IFTFCC International transport freight costs and other charges message
A code to identify the international transport freight costs and other charges message.

IFTICL Cargo insurance claims message
A code to identify the cargo insurance claims message.

IFTMAN Arrival notice message
A code to identify the arrival notice message.

IFTMBC Booking confirmation message
A code to identify the booking confirmation message.

IFTMBF Firm booking message
A code to identify the firm booking message.

IFTMBP Provisional booking message
A code to identify the provisional booking message.

IFTMCA Consignment advice message
A code to identify the consignment advice message.

IFTMCS Instruction contract status message
A code to identify the instruction contract status message.

IFTMIN Instruction message
A code to identify the instruction message.

IFTRIN Forwarding and transport rate information message
A code to identify the forwarding and transport rate information message.

IFTSAI Forwarding and transport schedule and availability information message
A code to identify the forwarding and transport schedule and availability information message.

IFTSTA International multimodal status report message
A code to identify the international multimodal status report message.

IFTSTQ International multimodal status request message
A code to identify the international multimodal status request message.

IHCEBI Interactive health insurance eligibility and benefits inquiry and response
A code to identify the interactive health insurance and Benefits inquiry and response.

IHCLME Health care claim or encounter request and response -
interactive message
A code to identify the health care claim or encounter
request and response - interactive message.

IMPDEF EDI implementation guide definition message
A code to identify the EDI implementation guide
definition message.

INFCON Infrastructure condition message
A code to identify the infrastructure condition message.

INFENT Enterprise accounting information message
A code to identify the enterprise accounting information
message.

INSDER Instruction to despatch message
A code to identify the instruction to despatch message.

INSPRE Insurance premium message
A code to identify the insurance premium message.

INSREQ Inspection request message
A code to identify the inspection request message.

INSRPT Inspection report message
A code to identify the inspection report message.

INVOIC Invoice message
A code to identify the invoice message.

INVRPT Inventory report message
A code to identify the inventory report message.

IPPOAD Insurance policy administration message
A code to identify the insurance policy administration
message.

IPPOMO Motor insurance policy message
A code to identify the motor insurance policy message.

ISENDS Intermediary system enablement or disablement message
A code to identify the intermediary system enablement or
disablement message.

ITRRPT In transit report detail message
A code to identify the in transit report detail message.

JAPRES Job application result message
A code to identify the job application result message.

JINFDE Job information demand message
A code to identify the job information demand message.

JOBAPP Job application proposal message
A code to identify the job application proposal message.

JOBCON Job order confirmation message
A code to identify the job order confirmation message.

JOBMOD Job order modification message
A code to identify the job order modification message.

JBOFF Job order message
A code to identify the job order message.

JUPREQ Justified payment request message
A code to identify the justified payment request message.

KEYMAN Security key and certificate management message
A code to identify the security key and certificate
management message.

LEDGER Ledger message
A code to identify the ledger message.

LREACT Life reinsurance activity message
A code to identify the life reinsurance activity message.

LRECLM Life reinsurance claims message
A code to identify the life reinsurance claims message.

MEDPID Person identification message
A code to identify the person identification message.

MEDPRE	Medical prescription message	A code to identify the medical prescription message.
MEDREQ	Medical service request message	A code to identify the medical service request message.
MEDRPT	Medical service report message	A code to identify the medical service report message.
MEDRUC	Medical resource usage and cost message	A code to identify the medical resource usage and cost message.
MEQPOS	Means of transport and equipment position message	A code to identify the means of transport and equipment position message.
MOVINS	Stowage instruction message	A code to identify the stowage instruction message.
MSCONS	Metered services consumption report message	A code to identify the metered services consumption report message.
ORDCHG	Purchase order change request message	A code to identify the purchase order change request message.
ORDERS	Purchase order message	A code to identify the purchase order message.
ORDRSP	Purchase order response message	A code to identify the purchase order response message.
OSTENQ	Order status enquiry message	A code to identify the order status enquiry message.
OSTRPT	Order status report message	A code to identify the order status report message.
PARTIN	Party information message	A code to identify the party information message.
PASREQ	Travel, tourism and leisure product application status request - interactive message	A code to identify the travel, tourism and leisure product application status request - interactive message.
PASRSP	Travel, tourism and leisure product application status response - interactive message	A code to identify the travel, tourism and leisure product application status response - interactive message.
PAXLST	Passenger list message	A code to identify the passenger list message.
PAYDUC	Payroll deductions advice message	A code to identify the payroll deductions advice message.
PAYEXT	Extended payment order message	A code to identify the extended payment order message.
PAYMUL	Multiple payment order message	A code to identify the multiple payment order message.
PAYORD	Payment order message	A code to identify the payment order message.
PRICAT	Price/sales catalogue message	A code to identify the price/sales catalogue message.
PRIHIS	Pricing history message	A code to identify the pricing history message.
PROCST	Project cost reporting message	A code to identify the project cost reporting message.
PRODAT	Product data message	A code to identify the product data message.

PRODEX Product exchange reconciliation message
 A code to identify the product exchange reconciliation message.

PROINQ Product inquiry message
 A code to identify the product inquiry message.

PROSRV Product service message
 A code to identify the product service message.

PROTAP Project tasks planning message
 A code to identify the project tasks planning message.

PRPAID Insurance premium payment message
 A code to identify the insurance premium payment message.

QUALITY Quality data message
 A code to identify the quality data message.

QUOTES Quote message
 A code to identify the quote message.

RDRMES Raw data reporting message
 A code to identify the raw data reporting message.

REBORD Reinsurance bordereau message
 A code to identify the reinsurance bordereau message.

RECADV Receiving advice message
 A code to identify the receiving advice message.

RECALC Reinsurance calculation message
 A code to identify the reinsurance calculation message.

RECECO Credit risk cover message
 A code to identify the credit risk cover message.

RECLAM Reinsurance claims message
 A code to identify the reinsurance claims message.

RECORD Reinsurance core data message
 A code to identify the reinsurance core data message.

REGENT Registration of enterprise message
 A code to identify the registration of enterprise message.

RELIST Reinsured objects list message
 A code to identify the reinsured objects list message.

REMADV Remittance advice message
 A code to identify the remittance advice message.

REPREM Reinsurance premium message
 A code to identify the reinsurance premium message.

REQDOC Request for document message
 A code to identify the request for document message.

REQOTE Request for quote message
 A code to identify the request for quote message.

RESETT Reinsurance settlement message
 A code to identify the reinsurance settlement message.

RESMSG Reservation message
 A code to identify the reservation message.

RESREQ Reservation request - interactive message
 A code to identify the reservation request - interactive message.

RESRSP Reservation response - interactive message
 A code to identify the reservation response - interactive message.

RETACC Reinsurance technical account message
 A code to identify the reinsurance technical account message.

RETANN Announcement for returns message
 A code to identify the announcement for returns message.

RETINS Instruction for returns message
 A code to identify the instruction for returns message.

RPCALL Repair call message
A code to identify the repair call message.

SAFHAZ Safety and hazard data message
A code to identify the safety and hazard data message.

SANCRT International movement of goods governmental regulatory message
A code to identify the international movement of goods governmental regulatory message.

SKDREQ Schedule request - interactive message
A code to identify the schedule request - interactive message.

SKDUPD Schedule update - interactive message
A code to identify the schedule update - interactive message.

SLSFCT Sales forecast message
A code to identify the sales forecast message.

SLSRPT Sales data report message
A code to identify the sales data report message.

SOCAD E Social administration message
A code to identify the social administration message.

SSIMOD Modification of identity details message
A code to identify the modification of identity details message.

SSRECH Worker's insurance history message
A code to identify the worker's insurance history message.

SSREGW Notification of registration of a worker message
A code to identify the notification of registration of a worker message.

STATAC Statement of account message
A code to identify the statement of account message.

STLRPT Settlement transaction reporting message
A code to identify the settlement transaction reporting message.

SUPCOT Superannuation contributions advice message
A code to identify the superannuation contributions advice message.

SUPMAN Superannuation maintenance message
A code to identify the superannuation maintenance message.

SUPRES Supplier response message
A code to identify the supplier response message.

TANSTA Tank status report message
A code to identify the tank status report message.

TAXCON Tax control message
A code to identify the tax control message.

TIQREQ Travel, tourism and leisure information inquiry request - interactive message
A code to identify the travel, tourism and leisure information inquiry request - interactive message.

TIQRSP Travel, tourism and leisure information inquiry response - interactive message
A code to identify the travel, tourism and leisure information inquiry response - interactive message.

TPFREP Terminal performance message
A code to identify the terminal performance message.

TSDUPD Timetable static data update - interactive message
A code to identify the timetable static data update - interactive message.

TUPREQ Travel, tourism and leisure data update request -
interactive message
A code to identify the travel, tourism and leisure data
update request - interactive message.

TUPRSP Travel, tourism and leisure data update response -
interactive message
A code to identify the travel, tourism and leisure data
update response - interactive message.

UTILMD Utilities master data message
A code to identify the utilities master data message.

UTILTS Utilities time series message
A code to identify the utilities time series message.

VATDEC Value added tax message
A code to identify the value added tax message.

VESDEP Vessel departure message
A code to identify the vessel departure message.

WASDIS Waste disposal information message
A code to identify the waste disposal information
message.

WKGRDC Work grant decision message
A code to identify the work grant decision message.

WKGRRE Work grant request message
A code to identify the work grant request message.

0073 First and last transfer

Desc: Indication used for the first and last message in a sequence
of messages related to the same topic.

Repr: a1

C Creation
First transmission of a number of transfers of the same
message.

F Final
Last transmission of a number of transfers of the same
message.

0081 Section identification

Desc: Identification of the separation of sections of a message.

Repr: a1

D Header/detail section separation
To qualify the segment UNS, when separating the header
from the detail section of a message.

S Detail/summary section separation
To qualify the segment UNS, when separating the detail
from the summary section of a message.

0083 Action, coded

Desc: A code indicating acknowledgement, or rejection (the action taken) of a subject interchange, or part of the subject interchange, or indication of interchange receipt.

Repr: an..3

- 4 This level and all lower levels rejected
The corresponding referenced-level and all its lower referenced-levels are rejected. One or more errors are reported at this reporting-level or a lower reporting-level.
- 7 This level acknowledged and all lower levels acknowledged if not explicitly rejected
The corresponding referenced-level is acknowledged. All messages, packages, or groups at the lower referenced-levels are acknowledged except those explicitly reported as rejected at their reporting-level in this CONTRL message.
- 8 Interchange received
Indication of interchange receipt.

0085 Syntax error, coded

Desc: A code indicating the error detected.

Repr: an..3

- 2 Syntax version or level not supported
Notification that the syntax version and/or level is not supported by the recipient.
- 7 Interchange recipient not actual recipient
Notification that the Interchange recipient (S003) is different from the actual recipient.
- 12 Invalid value
Notification that the value of a stand-alone data element, composite data element or component data element does not conform to the relevant specifications for the value.
- 13 Missing
Notification that a mandatory (or otherwise required) service or user segment, data element, composite data element or component data element is missing.
- 14 Value not supported in this position
Notification that the recipient does not support use of the specific value of an identified stand-alone data element, composite data element or component data element in the position where it is used. The value may be valid according to the relevant specifications and may be supported if it is used in another position.
- 15 Not supported in this position
Notification that the recipient does not support use of the segment type, stand-alone data element type, composite data element type or component data element type in the identified position.

- 16 Too many constituents
Notification that the identified segment contained too many data elements or that the identified composite data element contained too many component data elements.
- 17 No agreement
No agreement exists that allows receipt of an interchange, group, message, or package with the value of the identified stand-alone data element, composite data element or component data element.
- 18 Unspecified error
Notification that an error has been identified, but the nature of the error is not reported.
- 20 Character invalid as service character
Notification that a character advised in UNA is invalid as service character.
- 21 Invalid character(s)
Notification that one or more character(s) used in the interchange is not a valid character as defined by the syntax identifier indicated in UNB. The invalid character is part of the referenced-level, or followed immediately after the identified part of the interchange.
- 22 Invalid service character(s)
Notification that the service character(s) used in the interchange is not a valid service character as advised in UNA or not one of the default service characters. If the code is used in UCS or UCD, the invalid character followed immediately after the identified part of the interchange.
- 23 Unknown Interchange sender
Notification that the Interchange sender (S002) is unknown.
- 24 Too old
Notification that the received interchange or group is older than a limit specified in an IA or determined by the recipient.
- 25 Test indicator not supported
Notification that test processing cannot be performed for the identified interchange, group, message, or package.
- 26 Duplicate detected
Notification that a possible duplication of a previously received interchange, group, message, or package has been detected. The earlier transmission may have been rejected.
- 28 References do not match
Notification that the control reference in UNB, UNG, UNH, UNO, USH or USD does not match the one in UNZ, UNE, UNT, UNP, UST or USU, respectively.
- 29 Control count does not match number of instances received
Notification that the number of groups, messages, or segments does not match the number given in UNZ, UNE, UNT or UST, or that the length of an object or of encrypted data is not equal to the length stated in the UNO, UNP, USD, or USU.
- 30 Groups and messages/packages mixed
Notification that groups have been mixed with messages/packages outside of groups in the interchange.

- 32 Lower level empty
 Notification that the interchange does not contain any
 messages, packages, or groups, or a group does not
 contain any messages or packages.
- 33 Invalid occurrence outside message, package, or group
 Notification of an invalid segment or data element in the
 interchange, between messages or between packages or
 between groups. Rejection is reported at the level above.
- 35 Too many data element or segment repetitions
 Notification that a stand-alone data element, composite
 data element or segment is repeated too many times.
- 36 Too many segment group repetitions
 Notification that a segment group is repeated too many
 times.
- 37 Invalid type of character(s)
 Notification that one or more numeric characters are used
 in an alphabetic (component) data element or that one or
 more alphabetic characters are used in a numeric
 (component) data element.
- 39 Data element too long
 Notification that the length of the data element received
 exceeded the maximum length specified in the data element
 description.
- 40 Data element too short
 Notification that the length of the data element received
 is shorter than the minimum length specified in the data
 element description.
- 45 Trailing separator
 Notification of one of the following:
 - the last character before the segment terminator is a
 data element separator or a component data element
 separator or a repeating data element separator, or
 - the last character before a data element separator is a
 component data element separator or a repeating data
 element separator.
- 46 Character set not supported
 Notification that one or more characters used are not in
 the character set defined by the syntax identifier, or
 the character set identified by the escape sequence for
 the code extension technique is not supported by the
 recipient.
- 47 Envelope functionality not supported
 Notification that the envelope structure encountered is
 not supported by the recipient.
- 48 Dependency condition violated
 Notification that an error condition has occurred as the
 result of a dependency condition violation.

0113 Message type sub-function identification

Desc: Code identifying a sub-function of a message type.

Repr: an..6

Note 1: The code qualifies the message type data element (0065) to
 allow the recipient to identify a specific sub-function of a
 message.

- AA Interactive, perform sell
This sub-function is to notify the receiver that the purpose of the message is an instruction to perform a sell.
- AB Interactive, modify current dialogue data
This sub-function is to notify the receiver that the message data is a modification to data previously sent in the current interactive dialogue.
- AC Interactive, modify previous dialogue data
This sub-function is to notify the receiver that the message data is a modification to data sent in a previous interactive dialogue.
- AD Interactive, cancel reserved product
This sub-function is to notify the receiver that the purpose of the message is to cancel a product previously reserved in an interactive dialogue.
- AE Interactive, ignore reserved product
This sub-function is to notify the receiver that the purpose of the message is to ignore a product previously reserved in an interactive dialogue.
- AF Interactive, conclude current reservation
This sub-function is to notify the receiver that the purpose of the message is to conclude the current reservation transaction.
- AG Interactive, display reserved product
This sub-function is to notify the receiver that the purpose of the message is to display a product previously reserved in an interactive dialogue.
- AH Interactive, perform reference sell
This sub-function is to notify the receiver that the purpose of the message is an instruction to perform a sell, based on data returned in a previous interactive response.
- AI Interactive, modify previous dialogue reservation
This sub-function is to notify the receiver that the purpose of the message is to modify a reservation, made during a previous interactive dialogue.
- AJ Interactive, display voucher template
This sub-function is to notify the receiver that the purpose of the message is to display the template for a voucher.
- AK Interactive, print voucher
This sub-function is to notify the receiver that the purpose of the message is to print a voucher.
- AL Interactive, cancel current dialogue reservation
This sub-function is to notify the receiver that the purpose of the message is to cancel a reservation made during the current interactive dialogue.
- AM Interactive, cancel previous dialogue reservation
This sub-function is to notify the receiver that the purpose of the message is to cancel a reservation made during a previous interactive dialogue.
- AN Interactive, duplicate sell message
This sub-function is to notify the receiver that the message is a duplicate of a previously sent interactive sell message.

- AO Interactive, duplicate modify current dialogue data
This sub-function is to notify the receiver that the message is a duplicate of a previously sent message to modify data in the current interactive dialogue.
- AP Interactive, duplicate modify previous dialogue reservation
This sub-function is to notify the receiver that the message is a duplicate of a previously sent message to modify a reservation made during a previous interactive dialogue.
- AQ Interactive, availability request, multiple suppliers
This sub-function is to notify the receiver that the message is an interactive request for availability which is simultaneously being sent to multiple suppliers.
- AR Interactive, availability request, one specific supplier
This sub-function is to notify the receiver that the message is an interactive request for availability from only one specific supplier.
- AS Interactive, product rules request
This sub-function is to notify the receiver that the message is an interactive request for product rules.
- SECACK Security acknowledgment
This sub-function of the AUTACK message is for the secure acknowledgement of receipt, including the reporting of any associated security violation(s).
- SECAUT Security authentication and/or non-repudiation of origin
This sub-function of the AUTACK message is for secure integrity, authentication and/or non-repudiation of origin.

0133 Character encoding, coded

Desc: Coded identification of the character encoding used in the interchange.

Repr: an..3

Note 1: To be used as specified in the partners' interchange agreement, for the purpose of identifying the character repertoire encoding technique used in the interchange (when the default encoding defined by the character repertoire's associated character set specification is not used).

- 1 ASCII 7 bit
ASCII 7 bit code.
- 2 ASCII 8 bit
ASCII 8 bit code.
- 3 Code page 500 (EBCDIC Multinational No. 5)
Encoding schema for the repertoire as defined by the code page.
- 4 Code page 850 (IBM PC Multinational)
Encoding schema for the repertoire as defined by the code page.
- 5 UCS-2
Universal Multiple-Octet Coded Character Set (UCS) two-octet per character encoding schema as defined in ISO/IEC 10646-1.

- 6 UCS-4
Universal Multiple-Octet Coded Character Set (UCS)
four-octet per character encoding schema as defined in
ISO/IEC 10646-1.
- 7 UTF-8
UCS Transformation Format 8 (UTF-8) multi-octet (of
length one to six octets) per character encoding schema
as defined in ISO/IEC 10646-1, Annex R.
- 8 UTF-16
UCS Transformation Format 16 (UTF-16) two-octet per
character encoding schema as defined in ISO/IEC 10646-1,
Annex Q.
- ZZZ Mutually agreed
Mutually agreed between trading partners.

0135 Service segment tag, coded

Desc: Code identifying a service segment.

Repr: an..3

- UCD Data element error indication
To identify an erroneous stand-alone, composite or
component data element, and to identify the nature of the
error.
- UCF Group response
To identify a group in the subject interchange and to
indicate acknowledgement or rejection (action taken) of
the UNG and UNE segments, and to identify any error
related to these segments. It can also identify errors
related to the USA, USC, USD, USH, USR, UST, or USU
security segments when they appear at the group level.
Depending on the action code, it may also indicate the
action taken on the messages and packages within that
group.
- UCI Interchange response
To identify the subject interchange, to indicate
interchange receipt, to indicate acknowledgement or
rejection (action taken) of the UNA, UNB and UNZ
segments, and to identify any error related to these
segments. It can also identify errors related to the USA,
USC, USD, USH, USR, UST, or USU security segments when
they appear at the interchange level. Depending on the
action code, it may also indicate the action taken on the
groups, messages, and packages within that interchange.
- UCM Message/package response
To identify a message or package in the subject
interchange, and to indicate that message's or package's
acknowledgement or rejection (action taken), and to
identify any error related to the UNH, UNT, UNO, and UNP
segments. It can also identify errors related to the USA,
USC, USD, USH, USR, UST, or USU security segments when
they appear at the message or package level.
- UCS Segment error indication
To identify either a segment containing an error or a
missing segment, and to identify any error related to the
complete segment.

UGH	Anti-collision segment group header To head, identify and specify an anti-collision segment group.
UGT	Anti-collision segment group trailer To end and check the completeness of an anti-collision segment group.
UIB	Interactive interchange header To head and identify an interchange.
UIH	Interactive message header To head, identify and specify a message.
UIR	Interactive status To report the status of the dialogue.
UIT	Interactive message trailer To end and check the completeness of a message.
UIZ	Interactive interchange trailer To end and check the completeness of an interchange.
UNB	Interchange header To identify an interchange.
UNE	Group trailer To end and check the completeness of a group.
UNG	Group header To head, identify and specify a group of messages and/or packages, which may be used for internal routing and which may contain one or more message types and/or packages.
UNH	Message header To head, identify and specify a message.
UNO	Object header To head, identify and specify an object.
UNP	Object trailer To end and check the completeness of an object.
UNS	Section control To separate header, detail and summary sections of a message.
UNT	Message trailer To end and check the completeness of a message.
UNZ	Interchange trailer To end and check the completeness of an interchange.
USA	Security algorithm To identify a security algorithm, the technical usage made of it, and to contain the technical parameters required.
USB	Secured data identification To contain details related to the AUTACK.
USC	Certificate To convey the public key and the credentials of its owner.
USD	Data encryption header To specify size (i.e. length of data in octets of bits) of encrypted data following the segment terminator of this segment.
USE	Security message relation To specify the relation to earlier security messages, such as response to a particular request, or request for a particular answer.
USF	Key management function To specify the type of key management function and the status of a corresponding key or certificate.

USH	Security header To specify a security mechanism applied to a EDIFACT structure (i.e.: either message/package, group or interchange).
USL	Security list status To specify the status of security objects, such as keys or certificates to be delivered in a list, and the corresponding list parameters.
USR	Security result To contain the result of the security mechanisms.
UST	Security trailer To establish a link between security header and security trailer segment groups.
USU	Data encryption trailer To provide a trailer for the encrypted data.
USX	Security references To refer to the secured EDIFACT structure and its associated date and time.
USY	Security on references To identify the applicable header, and to contain the security result and/or to indicate the possible cause of security rejection for the referred value.

0323 Transfer position, coded

Desc: Indication of the position of a transfer.

Repr: a1

F	First message First message in sequence. Can only appear once at the start of the sequence.
I	Intermediate message Intermediate message in sequence. May appear zero or more times within the sequence.
L	Last message Last message in sequence. Can appear only once at the end of the sequence.

0325 Duplicate Indicator

Desc: Indication that the structure is a duplicate of a previously sent structure.

Repr: a1

D	Duplicate A duplicate transfer.
---	------------------------------------

0331 Report function, coded

Desc: Coded value identifying type of status or error report.

Repr: an..3

- 1 Information
Non Error information, e.g. acknowledgement that party is still operational.
- 2 Warning
Warning, e.g. resources getting low.
- 3 Non-fatal error
Non-fatal error detected by party sending the UIR.
Dialogue integrity may be compromised.
- 4 Abort dialogue
Established dialogue cannot continue.
- 5 Query status
Request for a status report from other party. Should be answered with a 'Status report' (see code value '6' below).
- 6 Status report
Reporting status of dialogue as perceived by sending party.
- 7 Pause dialogue
Advise other party to stop transferring data within this dialogue until a 'Continue dialogue' is received.
- 8 Continue dialogue
Advise that data flow may continue after being 'Paused' (see code value '7' above).
- 9 Start dialogue reject
Dialogue cannot be initiated.

0333 Report reason, coded

Desc: Code identifying the reason for the status or error report.

Repr: an..3

- 1 OK response
No further information.
- 2 Syntax error
Error detected in syntax.
- 3 Invalid header
Invalid header segment received.
- 4 Invalid trailer segment
Invalid trailer segment received.
- 5 Unsupported syntax
Syntax version/release not supported.
- 6 Unsupported scenario type
Scenario type not supported.
- 7 Unsupported scenario version
Scenario version/release not supported.
- 8 Unsupported dialogue type
Dialogue type not supported for this scenario.
- 9 Unsupported dialogue version
Dialogue type version/release not supported.
- 10 Unauthorised sender
Sender not authorised.
- 11 Sender rejected
Sender rejected for administrative reasons.
- 12 Multiple transactions unsupported
Multiple parallel transactions not supported.
- 13 Multiple dialogues unsupported
Multiple parallel dialogues not supported.

- 14 Resources unavailable
 Resources unavailable for requested function.
- 15 Unknown transaction
 Referenced transaction does not exist.
- 16 Unknown dialogue
 Referenced dialogue does not exist.
- 17 Invalid function
 Function invalid for current dialogue state.
- 18 Service unavailable
 Requested service is unavailable.
- 19 Application unavailable
 Requested application not available.
- 20 Time-out
 Response not received within expected time.
- 21 Unable to process interactively
 To notify the initiator that a specific request cannot be
 processed interactively.
- 22 Correctable application error
 To notify the initiator that an application error, that
 is correctable by the initiator, was made in the request
 message.
- 23 Nothing to return
 To notify the initiator that there is no information to
 return in response to an inquiry.
- 24 Data not accessible
 To notify the initiator that the requested information
 cannot be returned.
- 25 Non-correctable application error
 To notify the initiator that some type of system or
 processing error was encountered, not related to the data
 received.

0501 Security service, coded

Desc: Specification of the security service applied.

Repr: an..3

- 1 Non-repudiation of origin
 The message includes a digital signature protecting the
 receiver of the message from the sender's denial of
 having sent the message.
- 2 Message origin authentication
 The actual sender of the message cannot claim to be some
 other (authorised) entity.
- 3 Integrity
 The message content is protected against the modification
 of data.
- 4 Confidentiality
 The message content is protected against the unauthorised
 reading, copying or disclosure of its content.
- 5 Non-repudiation of receipt
 Non-repudiation of receipt protects the sender of an
 object message from the receiver's denial of having
 received the message.
- 6 Receipt authentication
 Receipt authentication assures the sender that the
 message has been received by the authenticated recipient.

- 7 Referenced EDIFACT structure non-repudiation of origin
The referenced EDIFACT structure is secured by a digital signature protecting the receiver of the message from the sender's denial of having sent the message.
- 8 Referenced EDIFACT structure origin authentication
The actual sender of the referenced EDIFACT structure cannot claim to be some other (authorised) party.
- 9 Referenced EDIFACT structure integrity
The referenced EDIFACT structure content is protected against the modification of data.
- 10 Time stamping request
Ask for the EDIFACT structure to be time stamped.
- 11 Entity authentication
The initiator and/or responder cannot claim to be another party.
- 12 Entity authentication with key establishment
The initiator and/or responder cannot claim to be another party, and security keys are established.

0503 Response type, coded

Desc: Specification of the type of response expected from the recipient.

Repr: an..3

- 1 No acknowledgement required
No AUTACK acknowledgement message expected.
- 2 Acknowledgement required
AUTACK acknowledgement message expected.

0505 Filter function, coded

Desc: Identification of the filtering function used to reversibly map any bit pattern on to a restricted character set.

Repr: an..3

- 1 No filter
No filter function is used.
 - 2 Hexadecimal filter
Hexadecimal filter.
 - 3 ISO 646 filter
ASCII filter as described in DIS 10126-1.
 - 4 ISO 646 Baudot filter
Baudot filter as described in DIS 10126-1.
 - 5 UN/EDIFACT EDA filter
Filter function for UN/EDIFACT character set repertoire A as described in Part 5 of ISO 9735.
 - 6 UN/EDIFACT EDC filter
Filter function for UN/EDIFACT character set repertoire A as described in Part 5 of ISO 9735.
 - 7 Base 64 filter
Base 64 filter function as described in RFC 1521.
 - ZZZ Mutually agreed
Mutually agreed between trading partners.
-

0507 Original character set encoding, coded

Desc: Identification of the character set in which the secured EDIFACT structure was encoded when security mechanisms were applied.

Repr: an..3

- 1 ASCII 7 bit
ASCII 7 bit code.
- 2 ASCII 8 bit
ASCII 8 bit code.
- 3 Code page 850 (IBM PC Multinational)
Encoding schema for the repertoire as defined by the code page.
- 4 Code page 500 (EBCDIC Multinational No. 5)
Encoding schema for the repertoire as defined by the code page.
- 5 UCS-2
Universal Multiple-Octet Coded Character Set (UCS)
two-octet per character encoding schema as defined in ISO/IEC 10646-1.
- 6 UCS-4
Universal Multiple-Octet Coded Character Set (UCS)
four-octet per character encoding schema as defined in ISO/IEC 10646-1.
- 7 UTF-8
UCS Transformation Format 8 (UTF-8) multi-octet (of length one to six octets) per character encoding schema as defined in ISO/IEC 10646-1, Annex R.
- 8 UTF-16
UCS Transformation Format 16 (UTF-16) two-octet per character encoding schema as defined in ISO/IEC 10646-1, Annex Q.
- ZZZ Mutually agreed
Mutually agreed between trading partners.

0509 Role of security provider, coded

Desc: Identification of the role of the security provider in relation to the secured item.

Repr: an..3

- 1 Issuer
The security provider is the rightful issuer of the signed document.
- 2 Notary
The security provider acts as a notary in relation to the signed document.
- 3 Contracting party
The security provider endorses the content of the signed document.
- 4 Witness
The security provider is a witness, but is not responsible for the content of the signed document.
- ZZZ Mutually agreed
Mutually agreed between trading partners.

0513 Security party code list qualifier

Desc: Identification of the type of identification used to register the security parties.

Repr: an..3

- 1 ACH
Automated clearing house identification.
- 2 GS1
GS1, an international organization of GS1 member organizations that manages the GS1 System.
- ZZZ Mutually agreed
Mutually agreed between trading partners.

0515 Security party code list responsible agency, coded

Desc: Identification of the agency in charge of registration of the security parties.

Repr: an..3

- 1 UN/CEFACT
United Nations Centre for Trade Facilitation and Electronic Business (UN/CEFACT).
- 2 ISO
International Organization for Standardization.

0517 Date and time qualifier

Desc: Specification of the type of date and time.

Repr: an..3

- 1 Security Timestamp
Security timestamp of the secured message.
 - 2 Certificate generation date and time
Identifies the date and time of generation of the certificate by the Certification Authority.
 - 3 Certificate start of validity period
Identifies the date and time from which the certificate must be considered valid.
 - 4 Certificate end of validity period
Identifies the date and time until which the certificate must be considered valid.
 - 5 EDIFACT structure generation date and time
Date and time of generation of the secured EDIFACT structure.
 - 6 Certificate revocation date and time
Identifies the date and time of revocation of the certificate by the Certification Authority.
 - 7 Key generation date and time
Identifies the date and time of generation of the key(s).
-

0523 Use of algorithm, coded

Desc: Specification of the usage made of the algorithm.

Repr: an..3

- 1 Owner hashing
 Specifies that the algorithm is used by the message sender to compute the hash function on the message (as in the case of Integrity or Non-repudiation of Origin identified in the security function qualifier of USH).
- 2 Owner symmetric
 Specifies that the algorithm is used by the message sender either for integrity, confidentiality, or message origin authentication (specified by security service, coded in USH).
- 3 Issuer signing
 Specifies that the algorithm is used by the Certificate Issuer (CA) to sign the hash result computed on the certificate.
- 4 Issuer hashing
 Specifies that the algorithm is used by the Certificate Issuer (CA) to compute the hash result on the certificate.
- 5 Owner enciphering
 Specifies that the algorithm is used by the message sender to encrypt a symmetric key.
- 6 Owner signing
 Specifies that the algorithm is used by the message sender to sign either the hash result computed on the message or the symmetric keys.
- 7 Owner enciphering or signing
 Specifies that the algorithm may be used by the message sender either to encrypt a symmetric key or sign the hash result computed on the message. This value may only be used in a USA segment within a USC segment group. When encrypting a symmetric key a receiver certificate shall be used. When signing a hash result a sender certificate shall be used.
- 8 Owner compressing
 Specifies that the algorithm is used by the message sender to compress the data before (encryption and) submission.
- 9 Owner compression integrity
 Specifies that the algorithm is used by the message sender on the compressed data before (encryption and) submission. The integrity value is used to verify the contents of the compressed text before expansion.
- 10 Key agreement
 Specifies that the algorithm is used by the initiator and responder to agree a secret key.

0525 Cryptographic mode of operation, coded

Desc: Specification of the mode of operation used for the algorithm.

Repr: an..3

- 1 ECB
DES modes of operation, Electronic Code Book; FIPS Pub 81 (1981); ANSI X3.106; IS 8372 (64 bits); ISO 10116 (n-bits).
- 2 CBC
DES modes of operation, Cipher Block Chaining; FIPS Pub 81 (1981); ANSI X3.106; IS 8372 (64 bits); ISO 10116 (n-bits).
- 3 CFB1
DES modes of operation, Cipher feedback; FIPS Pub 81 (1981); ANSI X3.106; IS 8372 (64 bits); ISO 10116 (n-bits).
- 4 CFB8
DES modes of operation, Cipher feedback; FIPS Pub 81 (1981); ANSI X3.106; IS 8372 (64 bits); ISO 10116 (n-bits).
- 5 OFB
DES modes of operation; FIPS Pub 81 (1981); IS 8372 (64 bits); ISO 10116 (n-bits).
- 16 DSMR
Digital Signature scheme giving Message Recovery. ISO 9796.
- 17 CFB64
DES mode of operation, cipher feedback; ISO 10116 (n-bits).
- 23 TCBC
TDEA mode of operation, Cipher Block Chaining, ANSI X9.52.
- 24 TCBC-I
TDEA mode of operation, Cipher Block Chaining - Interleaved, ANSI X9.52.
- 25 TCFB1
TDEA mode of operation, Cipher Feedback - 1 bit feedback, ANSI X9.52.
- 26 TCFB8
TDEA mode of operation, Cipher Feedback - 8 bit feedback, ANSI X9.52.
- 27 TCFB64
TDEA mode of operation, Cipher Feedback - 64 bit feedback, ANSI X9.52.
- 28 TCFB1-P
TDEA mode of operation, Cipher Feedback Pipelined - 1 bit feedback, ANSI X9.52.
- 29 TCFB8-P
TDEA mode of operation, Cipher Feedback Pipelined - 8 bit feedback, ANSI X9.52.
- 30 TCFB64-P
TDEA mode of operation, Cipher Feedback Pipelined - 64 bit feedback, ANSI X9.52.
- 31 TOFB
TDEA mode of operation, Output Feedback Mode, ANSI X9.52.
- 32 TOFB-P
TDEA mode of operation, Output Feedback Mode Pipelined, ANSI X9.52.
- 33 TCBCM
TDEA mode of operation, Cipher Block Chaining with output feedback Masking, ANSI X9.52.

- 34 TCBCM-I
TDEA mode of operation, Cipher Block Chaining with output
feedback Masking Interleaved, ANSI X9.52.
 - 35 TECB
TDEA mode of operation, Electronic Cookbook Mode, ANSI
X9.52.
 - 36 CTS
RC5 mode of operation, Cipher Text Stealing, Published in
RCF 2040.
 - ZZZ Mutually agreed
Mutually agreed between trading partners.
-

0527 Algorithm, coded

Desc: Identification of the algorithm.

Repr: an..3

- 1 DES
Data Encryption Standard. FIPS Pub 46 (January 1977).
- 2 MAA
Message Authentication Algorithm. Banking-Approved
Algorithms for message Authentication. ISO 8731-2.

ZZZ	Mutually agreed	Mutually agreed between trading partners.

0529 Algorithm code list identifier

Desc: Specification of the code list used to identify the algorithm.

Repr: an..3

- 1 UN/CEFACT
United Nations Centre for Trade Facilitation and
Electronic Business (UN/CEFACT).

0531 Algorithm parameter qualifier

Desc: Specification of the type of parameter value.

Repr: an..3

- 1 Initialisation value, clear text
Identifies the algorithm parameter value as an
unencrypted initialisation value.
- 2 Initialisation value, encrypted under a symmetric key
Identifies the algorithm parameter value as an
initialisation value which is encrypted under the
symmetric data key.
- 3 Initialisation value, encrypted under a public key
Identifies the algorithm parameter value as an
initialisation value encrypted under the public key of
the receiving party.
- 4 Initialisation value, format mutually agreed
Identifies the algorithm parameter value as an
initialisation value in a format agreed between the two
parties.
- 5 Symmetric key, encrypted under a symmetric key
Identifies the algorithm parameter value as a symmetric
key which is encrypted with a previously agreed algorithm
under a previously exchanged symmetric key.
- 6 Symmetric key, encrypted under a public key
Identifies the algorithm parameter value as a symmetric
key encrypted under the public key of the receiving
party.
- 7 Symmetric key, signed and encrypted
Identifies the algorithm parameter value as a symmetric
key signed under the sender's secret key, then encrypted
under the receiver's public key.
- 8 Symmetric key encrypted under an asymmetric key common to
the sender and the receiver
Identifies the algorithm parameter value as a symmetric
key encrypted under an asymmetric key common to the
sender and the receiver (use of Diffie and Hellman
scheme, for instance).
- 9 Symmetric key name
Identifies the algorithm parameter value as the name of a
symmetric key. This may be used in the case where a key
relationship has already been established between the
sender and receiver.
- 10 Key encrypting key name
Identifies the parameter value as the name of a key
encrypting key.

- 11 Symmetric key, format mutually agreed
 Identifies the algorithm parameter value as a symmetric
 key in a format agreed between the two parties.
- 12 Modulus
 Identifies the algorithm parameter value as the modulus
 of a public key which is to be used according to the
 function defined by the use of algorithm.
- 13 Exponent
 Identifies the algorithm parameter value as the exponent
 of a public key which is to be used according to the
 function defined by the use of algorithm.
- 14 Modulus length
 Identifies the algorithm parameter value as the length of
 the modulus (in bits) of the public key used in the
 algorithm. The length is independent of whatever
 filtering function may be in use.
- 15 Generic parameter 1
 Identifies the algorithm parameter value as the first
 generic parameter.
- 16 Generic parameter 2
 Identifies the algorithm parameter value as the second
 generic parameter.
- 17 Generic parameter 3
 Identifies the algorithm parameter value as the third
 generic parameter.
- 18 Generic parameter 4
 Identifies the algorithm parameter value as the fourth
 generic parameter.
- 19 Generic parameter 5
 Identifies the algorithm parameter value as the fifth
 generic parameter.
- 20 Generic parameter 6
 Identifies the algorithm parameter value as the sixth
 generic parameter.
- 21 Generic parameter 7
 Identifies the algorithm parameter value as the seventh
 generic parameter.
- 22 Generic parameter 8
 Identifies the algorithm parameter value as the eighth
 generic parameter.
- 23 Generic parameter 9
 Identifies the algorithm parameter value as the ninth
 generic parameter.
- 24 Generic parameter 10
 Identifies the algorithm parameter value as the tenth
 generic parameter.
- 25 DSA parameter P
 Identifies the algorithm parameter value as the parameter
 P of DSA algorithm.
- 26 DSA parameter Q
 Identifies the algorithm parameter value as the parameter
 Q of DSA algorithm.
- 27 DSA parameter G
 Identifies the algorithm parameter value as the parameter
 G of DSA algorithm.
- 28 DSA parameter Y
 Identifies the algorithm parameter value as the parameter
 Y of DSA algorithm.

- 29 Initial value for CRC calculation
Identifies the algorithm parameter value as the initial value for the CRC calculation.
- 30 Initial directory tree
Identifies the algorithm parameter value as the initial directory tree for the data compression algorithm specified.
- 31 Integrity value offset
Identifies the algorithm parameter value as the offset within the compressed text where the integrity value is located.
- 33 Generator
Identifies the algorithm parameter value as the generator for a secret key agreement mechanism.
- 34 Symmetric key activation date/time
Identifies the activation date/time of a symmetric key. The date/time format shall be CCYYMMDDHHMMSS.
- 35 PKCS#1-EME-OAEP HF
Identifies the algorithm parameter value as the code of the hash function used by EME-OAEP padding mechanism as defined in PKCS#1, Version 2.
- 36 PKCS#1-EME-OAEP MGF
Identifies the algorithm parameter value as the code of the mask generation function used by EME-OAEP padding mechanism as defined in PKCS#1, Version 2.
- 37 PKCS#1-EME-OAEP P Init
Identifies the algorithm parameter value as the initial octets of the encoding parameter octet string (P) used by EME-OAEP padding mechanism as defined in PKCS#1, Version 2.
- 38 PKCS#1-EME-OAEP P Cont
Identifies the algorithm parameter value as the additional octets of the encoding parameter octet string (P) following the initial octets, used by EME-OAEP padding mechanism as defined in PKCS#1, Version 2.
- 39 PKCS#1-EME-OAEP P Final
Identifies the algorithm parameter value as the final octets of the encoding parameter octet string (P) following the initial or additional octets, used by EME-OAEP padding mechanism as defined in PKCS#1, Version 2.
- 40 PKCS#1-EME-OAEP HF/MGF
Identifies the algorithm parameter value as the code of the hash function used by the mask generation function used by EME-OAEP padding mechanism as defined in PKCS#1, Version 2.
- 41 PKCS#1-EME-OAEP LENGTH
Identifies the algorithm parameter value as the intended length of the result produced by EME-OAEP padding mechanism as defined in PKCS#1, Version 2.
- ZZZ Mutually agreed
Mutually agreed between trading partners.
-

0533 Mode of operation code list identifier

Desc: Specification of the code list used to identify the cryptographic mode of operation.

Repr: an..3

- 1 UN/CEFACT
United Nations Centre for Trade Facilitation and
Electronic Business (UN/CEFACT).

0541 Scope of security application, coded

Desc: Specification of the scope of application of the security service defined in the security header.

Repr: an..3

Note 1: It defines the data that have to be taken into account by the related cryptographic process.

- 1 Security header and message body
The current security header segment group and the object body itself, only. In this case no other security header or security trailer segment group shall be encompassed within this scope.
- 2 From security header to security trailer
From the current security header segment group, to the associated security trailer segment group. In this case the current security header segment group, the object body and all the other embedded security header and trailer segment groups shall be encompassed within this scope.
- 3 Whole related message, package, group or interchange
From the first character of the message, group, or interchange to the last character of the message, group or interchange.
- 4 Interactive security information, security header and message body
Related security information, related interactive security header and interactive message body.
- 5 Interactive security information plus security header to security trailer
Related security information, security header, all other embedded interactive security headers, interactive message body and all other embedded interactive security trailers.
- 6 Entire batch message
From and including, the first character ("U") of the message header segment (UNH) through to and including, the last character (segment terminator) of the corresponding message trailer segment (UNT).
- ZZZ Mutually agreed
The scope of security application is defined in an agreement between sender and receiver.

0543 Certificate original character set repertoire, coded

Desc: Identification of the character set repertoire used to create the certificate it was signed.

Repr: an..3

- 1 UN/ECE level A
As defined in the basic code table of ISO 646 with the exceptions of lower case letters, alternative graphic character allocations and national or application-oriented graphic character allocations.
- 2 UN/ECE level B
As defined in the basic code table of ISO 646 with the exceptions of alternative graphic character allocations and national or application-oriented graphic character allocations.
- 3 UN/ECE level C
As defined in ISO 8859-1 : Information processing - Part 1: Latin alphabet No. 1.
- 4 UN/ECE level D
As defined in ISO 8859-2 : Information processing - Part 2: Latin alphabet No. 2.
- 5 UN/ECE level E
As defined in ISO 8859-5 : Information processing - Part 5: Latin/Cyrillic alphabet.
- 6 UN/ECE level F
As defined in ISO 8859-7 : Information processing - Part 7: Latin/Greek alphabet.
- 7 UN/ECE level G
As defined in ISO 8859-3 : Information processing - Part 3: Latin alphabet.
- 8 UN/ECE level H
As defined in ISO 8859-4 : Information processing - Part 4: Latin alphabet.
- 9 UN/ECE level I
As defined in ISO 8859-6 : Information processing - Part 6: Latin/Arabic alphabet.
- 10 UN/ECE level J
As defined in ISO 8859-8 : Information processing - Part 8: Latin/Hebrew alphabet.
- 11 UN/ECE level K
As defined in ISO 8859-9 : Information processing - Part 9: Latin alphabet.
- 12 UN/ECE level X
Code extension technique as defined by ISO 2022 utilising the escape techniques in accordance with ISO 2375.
- 13 UN/ECE level Y
ISO 10646-1 octet without code extension technique.
- 14 UN/ECE level W
ISO 10646-1 octet with code extension technique to support UTF-8 (UCS Transformation Format, 8 bit) encoding.

0545 Certificate syntax and version, coded

Desc: Coded identification of the syntax and version used to create the certificate.

Repr: an..3

- 1 EDIFACT version 4
ISO 9735 version 4.
- 2 EDIFACT version 3
ISO 9735 version 3.
- 3 X.509
ISO/IEC 9594-8, ITU X.509 key/certificate reference.
- 4 PGP
PGP (Pretty Good Privacy) based format key/certificate reference.
- 5 EDI 5 v1.4
Version 1.4 of the EDI 5 certificate (French national standard).

0551 Service character for signature qualifier

Desc: Identification of the type of service character used when the signature was computed.

Repr: an..3

- 1 Segment terminator
Specifies that this is the separator at the end of segments.
- 2 Component data element separator
Specifies that this is the separator between component data elements.
- 3 Data element separator
Specifies that this is the separator between data elements.
- 4 Release character
Specifies that this is the release character.
- 5 Repetition separator
Specifies that this is the separator between repeating data elements.

0563 Validation value, qualifier

Desc: Identification of the type of validation value.

Repr: an..3

- 1 Unique validation value
Specifies that this is the unique validation value. This code shall be used when the algorithm involved produces a single parameter result (one MAC with DES algorithm, or one digital signature with RSA algorithm, for instance).
- 2 DSA algorithm r parameter
Specifies that this is the r parameter, resulting of the use of DSA algorithm.
- 3 DSA algorithm s parameter
Specifies that this is the s parameter, resulting of the use of DSA algorithm.
- 4 Random number for party A
A random number generated by party A in a key agreement or entity authentication protocol.
- 5 Random number for party B
A random number generated by party B in a key agreement or entity authentication protocol.

- 6 Enciphered block under a symmetric algorithm
 The result of the encipherment of data under a symmetric algorithm in an entity authentication protocol.
 - 7 Enciphered block under an asymmetric algorithm
 The result of the encipherment of data under an asymmetric algorithm in an entity authentication protocol.
 - 8 Key agreement value
 The value calculated in a key agreement protocol.
-

0565 Message relation, coded

Desc: Relationship with another message, past or future.

Repr: an..3

- 1 No relation
 The message is initial.
 - 2 Response
 The message is a response message.
 - 3 Response requested
 The message requests an answer.
-

0567 Security status, coded

Desc: Identification of the security element (key or certificate, for instance) status.

Repr: an..3

- 1 Valid
 The security element is valid.
 - 2 Revoked
 The security element has been revoked.
 - 3 Unknown
 The status of the security element is unknown.
 - 4 Discontinued
 The security element should not be used for ?????
 - 5 Alert
 The security element has been put on alert, but is not revoked yet.
 - 6 Expired
 The validity period of the security element is expired.
-

0569 Revocation reason, coded

Desc: Identification of the reason why the certificate has been revoked.

Repr: an..3

- 1 Owner key compromised
 The owner key linked to this certificate has been compromised.
- 2 Issuer key compromised
 The issuer key used to generate this certificate has been compromised.

- 3 Owner changed affiliation
The identification details of the certificate are no longer valid.
- 4 Certificate superseded
This certificate has been renewed and is superseded by another certificate.
- 5 Certificate terminated
This certificate has reached the end of its validity period and has not been renewed.
- 6 No information available
This certificate is revoked but the reason is not explicit stated.
- ZZZ Mutually agreed
Mutually agreed between trading partners.

0571 Security error, coded

Desc: Identifies the security error causing the rejection of the EDIFACT structure.

Repr: an..3

Note 1: This element shall specify the security error encountered. These may be the reason for non-acknowledgement by a request for secure acknowledgement, or may be sent on the initiative of the receiver of an AUTACK or secured EDIFACT structure which contains error.

- 1 Wrong authenticator
The validation is wrong.
- 2 Wrong certificate
The certificate is wrong.
- 3 Certification path
The certification path is incomplete. Cannot verify.
- 4 Algorithm not supported
The algorithm is not supported.
- 5 Hashing method not supported
The hashing method is not supported.
- 6 Protocol error
The stated protocol has not been followed.
- 7 Security expected but not present
It was expected the user message would be secured (eg using integrated message security or the AUTACK message in authentication mode), but this was not present or received in the expected time period.
- 8 Security parameters do not match those expected
The parameters specifying the applied security do not match those expected (eg from an interchange agreement).

0575 List parameter qualifier

Desc: Specification of the type of list parameter.

Repr: an..3

- ZZZ Mutually defined
Mutually defined between trading partners.

0577 Security party qualifier

Desc: Identification of the role of the security party.

Repr: an..3

- 1 Message sender
Identifies the party which generates the security parameters of the message (i.e. security originator).
 - 2 Message receiver
Identifies the party which verifies the security parameters of the message (i.e. security recipient).
 - 3 Certificate owner
Identifies the party which owns the certificate.
 - 4 Authenticating party
Party which certifies that the document (i.e. the certificate) is authentic.
-

0579 Key management function qualifier

Desc: Specification of the type of key management function.

Repr: an..3

- 101 Registration submission
Submission of information for registration.
- 102 Asymmetric key pair request
Request a trusted party to generate an asymmetric key pair.
- 110 Certification request
Request certification of credentials and public key.
- 111 Certificate renewal request
Request to extend the validity period of the current valid key, whose certificate is about to expire.
- 112 Certificate replacement request
Request to replace the current certificate by a new one with a different public key (and possibly other information).
- 121 Certificate (path) retrieval request
Request the delivery of an existing (valid or revoked) certificate, with path details where appropriate.
- 123 Certificate list retrieval request
Request full or partial list of certificate.
- 124 Certificate status request
Request current status of a given certificate.
- 125 Certificate validation request
Request the CA to validate an existing certificate.
- 126 Certificate delivery request
Request the CA to deliver a (valid or revoked) certificate to a list of recipients known to the CA or specified elsewhere.
- 130 Revocation request
Request revocation of a party's certificate.
- 131 Alert request
Request to put a party's certificate on alert.
- 140 Revocation list request
Request full or partial list of revoked certificates.

- 150 Symmetric key request
Request the delivery of symmetric keys.
 - 151 Symmetric key discontinuation request
Request discontinuation of symmetric key.
 - 152 Asymmetric key discontinuation request
Request discontinuation of asymmetric key.
 - 221 Certificate delivery
Delivery of an existing (valid or revoked) certificate.
 - 222 Certificate path delivery
Delivery of a path.
 - 224 Certificate status notice
Notice of current status of a given certificate.
 - 225 Certificate validation notice
Notice of validation of an existing certificate.
 - 231 Revocation confirmation
Confirmation of revocation of a party's certificate.
 - 251 Symmetric key delivery
Delivery of symmetric keys.
 - 252 Discontinuation acknowledgement
Acknowledgement of the requested discontinuation.
-

0591 Padding mechanism, coded

Desc: Padding mechanism or padding scheme applied.

Repr: an..3

- 1 Zero padding
Message padding used for block cipher algorithms. Binary zeros are appended to the end of the message in order to make the message length an exact integer multiple of the block length. The block length is implicitly specified through the algorithm and mode of operation.
- 2 PKCS #1 padding
Message padding used for block cipher algorithms according to PKCS #1 (published by RSA Inc., 1993).
- 3 ISO 10126 padding
Message padding used for block cipher algorithms according to ISO-10126 specification.
- 4 TBSS padding
Message padding used for block cipher algorithms according to TBSS (Swiss standard, published by Telekurs AG, 1996).
- 5 FF padding
Message padding used for block cipher algorithms. Binary 255 are padded to fill a message up to a block length. The block length is implicit specified through the algorithm and mode of operation.
- 6 ISO 9796 #1 padding
Message padding for digital signature schemes according to ISO 9796 part 1.
- 7 ISO 9796 #2 padding
Message padding for digital signature schemes according to ISO 9796 part 2.
- 8 ISO 9796 #3 padding
Message padding for digital signature schemes according to ISO 9796 part 3.

- 9 TBSS envelope padding
Message padding for digital envelopes according to TBSS
(Swiss standard, published by Telekurs AG, 1996)
- 10 PKCS #1 envelope padding
Message padding for digital envelopes according to PKCS
#1 (published by RSA Inc, 1993).
- 11 PKCS #1 signature padding
Message padding for digital signature schemes according
to PKCS #1 (published by RSA Inc, 1993).
- 12 BCS signature padding
Message padding for digital signature schemes according
to ZKA (German standard published by ZKA 1995).
- 13 OAEP
Optimal Asymmetric Encryption Padding (published in IEEE
P1363).
- 14 RSAES-OAEP
Padding mechanism specified in PKCS#1, version2, for
encryption with a RSA public key.
- 15 RSAES-PKCS#1-v1_5
Padding mechanism specified in PKCS#1, version2, for
encryption with a RSA public key.
- 16 RSASA-PKCS-v1_5
Padding mechanism specified in PKCS#1, version2, for
digital signatures.
- 17 Encryption Block Formatting
Padding mechanism specified in PKCS#1, version 1.5.
- 18 PKCS#5
Padding mechanism specified in PKCS#5 for symmetric
encryption.
- 19 ANSI X9.23
Padding mechanism specified in ANSI X9.23 for symmetric
encryption.

0601 Padding mechanism code list identifier

Desc: Specification of the code list used to identify the padding
mechanism or padding scheme.

Repr: an..3

- 1 UN/CEFACT
United Nations Centre for Trade Facilitation and
Electronic Business (UN/CEFACT).

0805 Object type qualifier

Desc: Qualifier referring to the type of object.

Repr: an..3

- 1 Computer environment type
Specification of the type of computer environment for
which the object is intended.
- 2 Computer environment version
Specification of the version of the computer environment
for which the object is intended.

- 3 Computer environment release
 Specification of the release of the computer environment
 for which the object is intended.
- 5 Computer environment name
 Specification of the name of the computer environment for
 which the object is intended.
- 6 Non-EDIFACT security level code
 Specification of the level such as interchange, group or
 message at which non-EDIFACT security is applied to the
 data constituting the object.
- 7 Non-EDIFACT security version
 Specification of the version of the non-EDIFACT security
 technique applied to the data constituting the object.
- 8 Non-EDIFACT security release
 Specification of the release of the non-EDIFACT security
 technique applied to the data constituting the object.
- 9 Non-EDIFACT security technique
 Specification of the non-EDIFACT security technique
 applied to the data constituting the object.
- 10 Non-EDIFACT security free text information
 Free form description of the non-EDIFACT security
 technique applied to the data constituting the object.
- 11 File identification by number
 Identification number assigned to the file constituting
 the object.
- 12 File identification by name
 Name assigned to the file constituting the object.
- 13 File format
 Specification of the format of the file constituting the
 object.
- 14 File version
 Specification of the version of the file constituting the
 object.
- 15 File release
 Specification of the release of the file constituting the
 object.
- 16 File status
 Specification of the status of the file constituting the
 object.
- 17 File size
 Specification of the size of the file constituting the
 object in bytes.
- 18 File description
 Free form description of the file constituting the
 object.
- 19 File block type
 Specification of the type of blocking used to partition
 the file constituting the object.
- 20 File block length
 Specification of the length of the blocks used to
 partition the file constituting the object.
- 21 File record length
 Specification of the length of the records contained in
 the file constituting the object expressed as the number
 of character positions.
- 22 Program identification by number
 Identification number assigned to the program
 constituting the object.
- 23 Program identification by name

- 24

Name assigned to the program constituting the object.
- 24

Program type

Specification of the type of program constituting the object.
- 25

Program version

Specification of the version of the program constituting the object.
- 26

Program release

Specification of the release of the program constituting the object.
- 27

Program status

Specification of the status of the program constituting the object.
- 28

Program description

Free form description of the program constituting the object.
- 29

Program size

Specification of the size of the program constituting the object in bytes.
- 30

Interchange format

Specification of the format of the interchange constituting the object.
- 31

Interchange version

Specification of the version of the interchange constituting the object.
- 32

Interchange release

Specification of the release of the interchange constituting the object.
- 33

Interchange status

Specification of the status of the interchange constituting the object.
- 34

Interchange identification

Identification number assigned to the interchange constituting the object.
- 35

Compression technique identification

An identification assigned to the compression technique applied to the object.
- 36

Compression technique version

Specification of the version of the compression technique applied to the object.
- 37

Compression technique release

Specification of the release of the compression technique applied to the object.
- 38

Drawing identification by name

Name assigned to the drawing constituting the object.
- 39

Drawing identification by number

Identification number assigned to the drawing constituting the object.
- 40

Drawing type

Specification of the type of drawing constituting the object.
- 41

Drawing format

Specification of the format of the drawing constituting the object.
- 42

Drawing version

Specification of the version of the drawing constituting the object.

- 43 Drawing release
Specification of the release of the drawing constituting the object.
 - 44 Drawing status
Specification of the status of the drawing constituting the object.
 - 45 Drawing size
Specification of the size of the drawing constituting the object in bytes.
 - 46 Drawing description
Free form description of the drawing constituting the object.
 - 48 Filter type
Specification of the type of filtering technique applied to the object.
 - 49 Filter version
Specification of the version of the filtering technique applied to the object.
 - 50 Filter code page
Specification of the code page used for the filtering technique applied to the object.
 - 51 Filter technique
Specification of the filtering technique applied to the object.
 - 52 Character set repertoire identification
Identification of the character set repertoire used for the object.
 - 53 Character set encoding technique
Specification of the character set encoding technique used for the object.
 - 54 Character set encoding technique code page
Specification of the code page used for the character set encoding technique used for the object.
 - 55 Certificate type
Specification of the type of certificate constituting the object.
 - 56 Certificate version
Specification of the version of the certificate constituting the object.
 - 57 Certificate release
Specification of the release of the certificate constituting the object.
 - 58 Certificate status
Specification of the status of the certificate constituting the object.
 - 60 Certificate identification by name
Name assigned to the certificate constituting the object.
 - 61 Certificate identification by number
Identification number assigned to the certificate constituting the object.
 - 62 Certificate format
Specification of the format of the certificate constituting the object.
 - 63 Certificate code page
Specification of the code page used when generating the certificate constituting the object.
-

0813 Reference qualifier

Desc: Code giving specific meaning to a reference identification number.

Repr: an..3

- 1 Object identification number
Identification number assigned to an object.
- 2 Application message reference number
Reference number assigned to a message by a computer application.
