

GEFEG.FX

eBusiness Interface Design

The desktop software GEFEG.FX supports data harmonization and streamlines the development and maintenance of eBusiness standards, data models and individual data formats.

The use of GEFEG.FX reduces workload and data redundancy and increases the quality and reusability of data in different data exchange formats and standards. To this end, GEFEG.FX standardizes and simplifies all routine work for the design, maintenance and customer-specific adaptation of business data standards.

GEFEG.FX offers innovative, future-proof and technologically sophisticated functions for the integration, harmonization and consistency of corporate electronic business data.

Features

- Design of electronic interfaces as a model, XML schema or based on classic eBusiness standards
- Customer-specific description in guidelines
- Syntactic and semantic check based on eBusiness standards of an industry, a standard organization or a company
- Visualization of real EDI messages and generation of human-readable documentation in various output formats at the push of a button
- Management and processing of all company-specific data formats and their use with a single software
- The single-source principle ensures that specification, documentation and transaction are consistent

GEFEG.FX users on 6 continents

Advantages

- Ensuring high data quality in the electronic exchange of business data between business partners and simultaneously accelerating the implementation of the business process
- Time and effort savings
- Significantly lower project costs
- Increase in productivity
- Improved compatibility
